WORKSHOP tau lepton decays: hadronic currents from Belle BaBar data and LHC signatures

Monday 14 May 2012 - Saturday 19 May 2012

Institute of Nuclear Physics, Cracow

Book of abstracts

Table of contents

Introduction 1

RChL currents in Tauola: implementation and fit parameters 1

Resonace Chiral Lagrangians and hadronic currents theoretical uncertainty 1

Using spin of tau to constrain hard interactions. 1

TauSpinner and its application to data analysis 1

2HDM(II) radiative corrections in leptonic tau decays 1

LFV at LHCb 1

title 2

(N)NLL+(N)NLO QCD predictions and QED FSR for a novel variable which probes the low Z pT domain 2

Measurement of polarization in B to D^* tau nu decays 2

Tau reconstruction and identification at CMS 2

Tau identification and recosntruction at ATLAS 2

Physics searches with tau leptons at ATLAS 2

title 2

Advanced analysis methods: today and tomorrow 2

Software organization of the projects related to TAUOLA 3

Confronting Theoretical Models with Experimental Data - Perspectives on tau^- to h^- h^- h^+ nu 3

Belle pion form factor in tauola 3

What next? 3

Introduction 3

CMS searches using tau leptons, including HIggs and SUSY 3

to be announced or cancelled 3
