

Welcome

Добро пожаловать

Third Russian Teachers Programme

October-November 2011

Accelerating Science and Innovation

Introduction to CERN

European Organization for Nuclear Research

**Tadeusz KURTYKA – CERN - Projects Office of Accelerator Sector /
International Relations Office**

The Mission of CERN

- **Push forward** the frontiers of knowledge

E.g. the secrets of the Big Bang ...what was the matter like within the first seconds of the Universe's life?

- **Develop** new technologies

Information technology - the Web and the GRID
Medicine - diagnosis and therapy

Brain Metabolism in Alzheimer's Disease: PET Scan

- **Train** scientists and engineers of tomorrow

- **Unite** people from different countries and cultures

LHC

Super-Microscope

Study physics laws of first moments after Big Bang

↙ increasing Symbiosis between Particle Physics, Astrophysics and Cosmology

Radius of Galaxies

Universe

Enter a New Era in Fundamental Science

Large Hadron Collider (LHC), one of the largest and truly global scientific projects ever, is the most exciting turning point in particle physics.

Exploration of a new energy frontier
Proton-proton collisions at $E_{\text{CM}} = 14 \text{ TeV}$

LHC – Large Hadron Collider

LHC - Large Hadron Collider

7 TeV + 7 TeV

Luminosity =
 $10^{34} \text{cm}^{-2} \text{sec}^{-1}$

Primary targets:

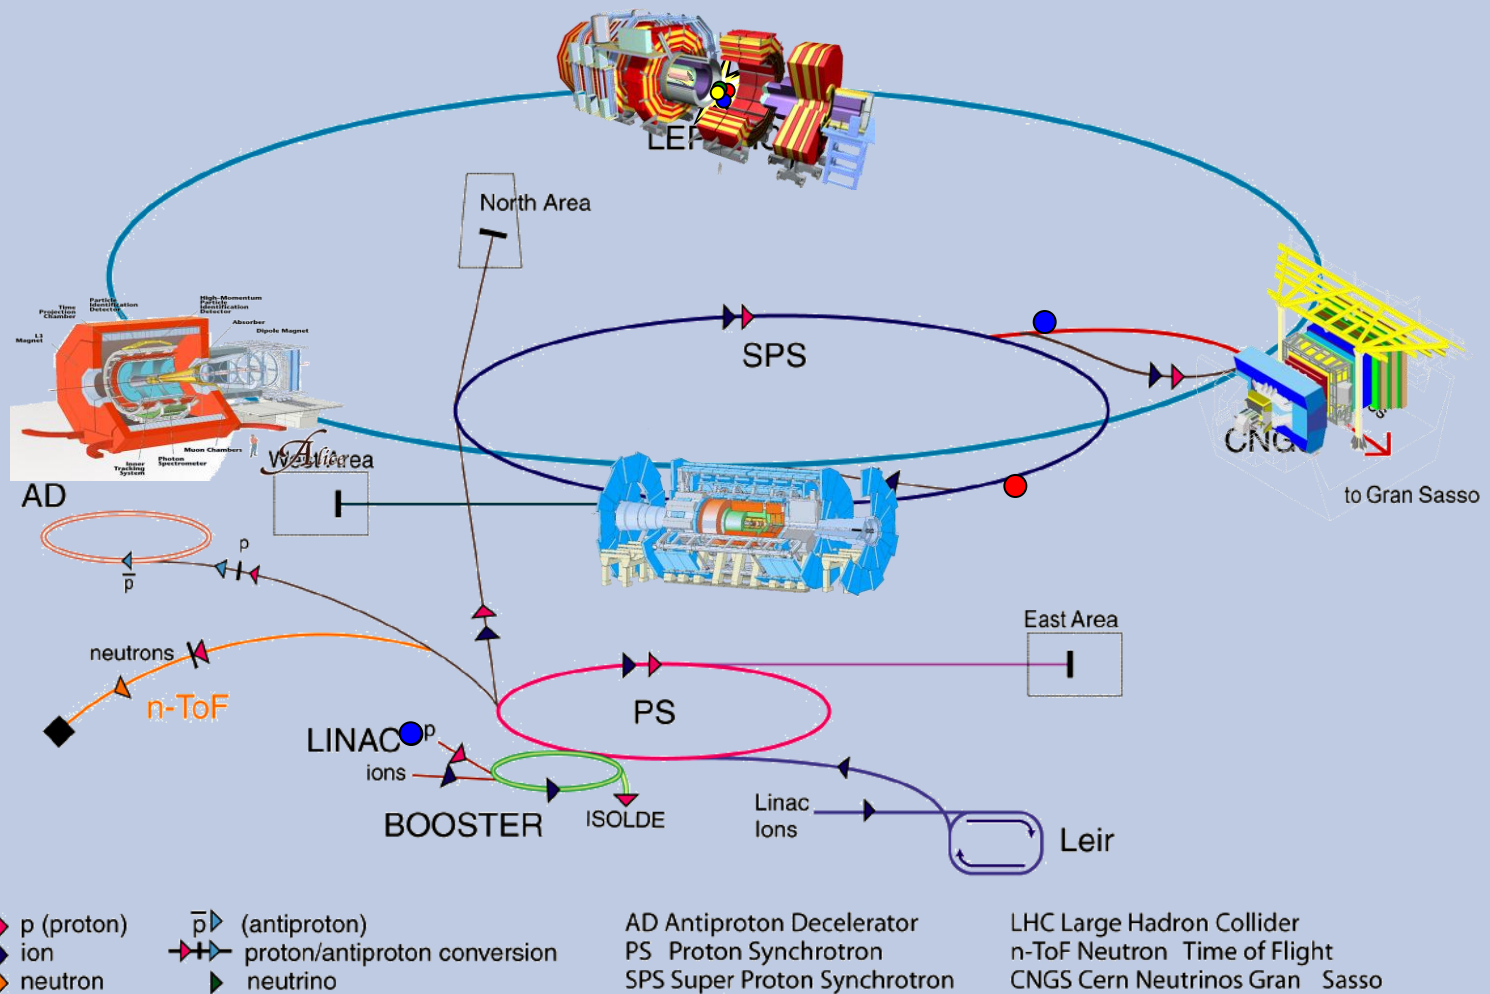

- Origin of mass
- Nature of Dark Matter
- Primordial Plasma
- Matter vs Antimatter

**The LHC results will
determine the future course
of High Energy Physics**

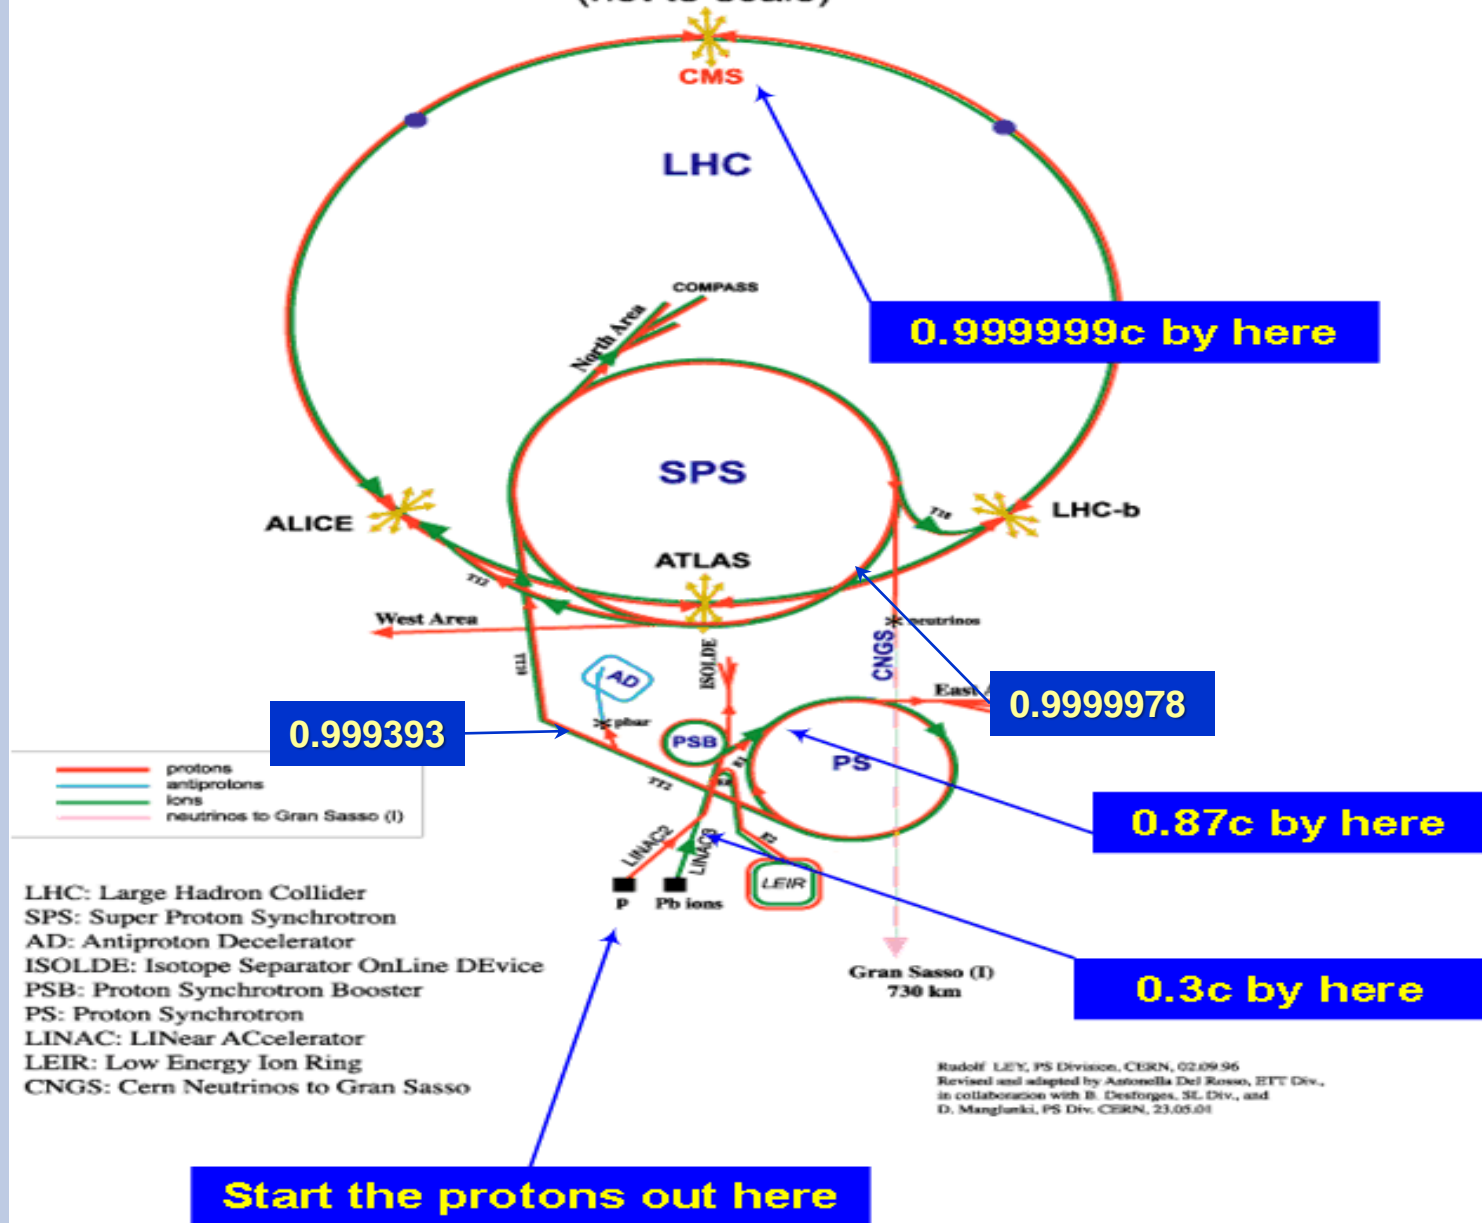

The large Hadron Collider

Collision of proton beams...

...observed in giant detectors

CERN Accelerators (not to scale)

LHC Magnets

- **A. Accelerator magnets**
 - Bending magnets (dipoles)
 - Focusing magnets (quadrupoles)
 - Correction magnets

LHC Magnets

- 1. **Dipole magnets** are bending the trajectory of particles (keep them on circular trajectory)

Problem no.1

Calculate the magnetic field **B** necessary to keep the protons of the energy **$E = 7 \text{ TeV}$** on a (nearly) circular trajectory of the LHC ring (approx. radius **$R = 4.3 \text{ km}$**), knowing that at this energy the protons will have the speed **$v = 99.9999991\%$** of speed of light **c**

а) $\vec{v} \perp \vec{B}$ ($q > 0$)

б) $\vec{v} \perp \vec{B}$ ($q < 0$)

$$R = \frac{mv}{qB}$$

LHC + Experiments: spectacular start-up in 2010

First p-p collisions at $\sqrt{s} = 7$ TeV on 30 March 2010, restart 13 March 2011
First Pb-Pb collisions on 7 Nov 2010

→ Brilliant performances of LHC, experiments and computing

Impressive detector performances

Searching for new particles requires selection and analysis of enormous quantity of data from LHC detectors

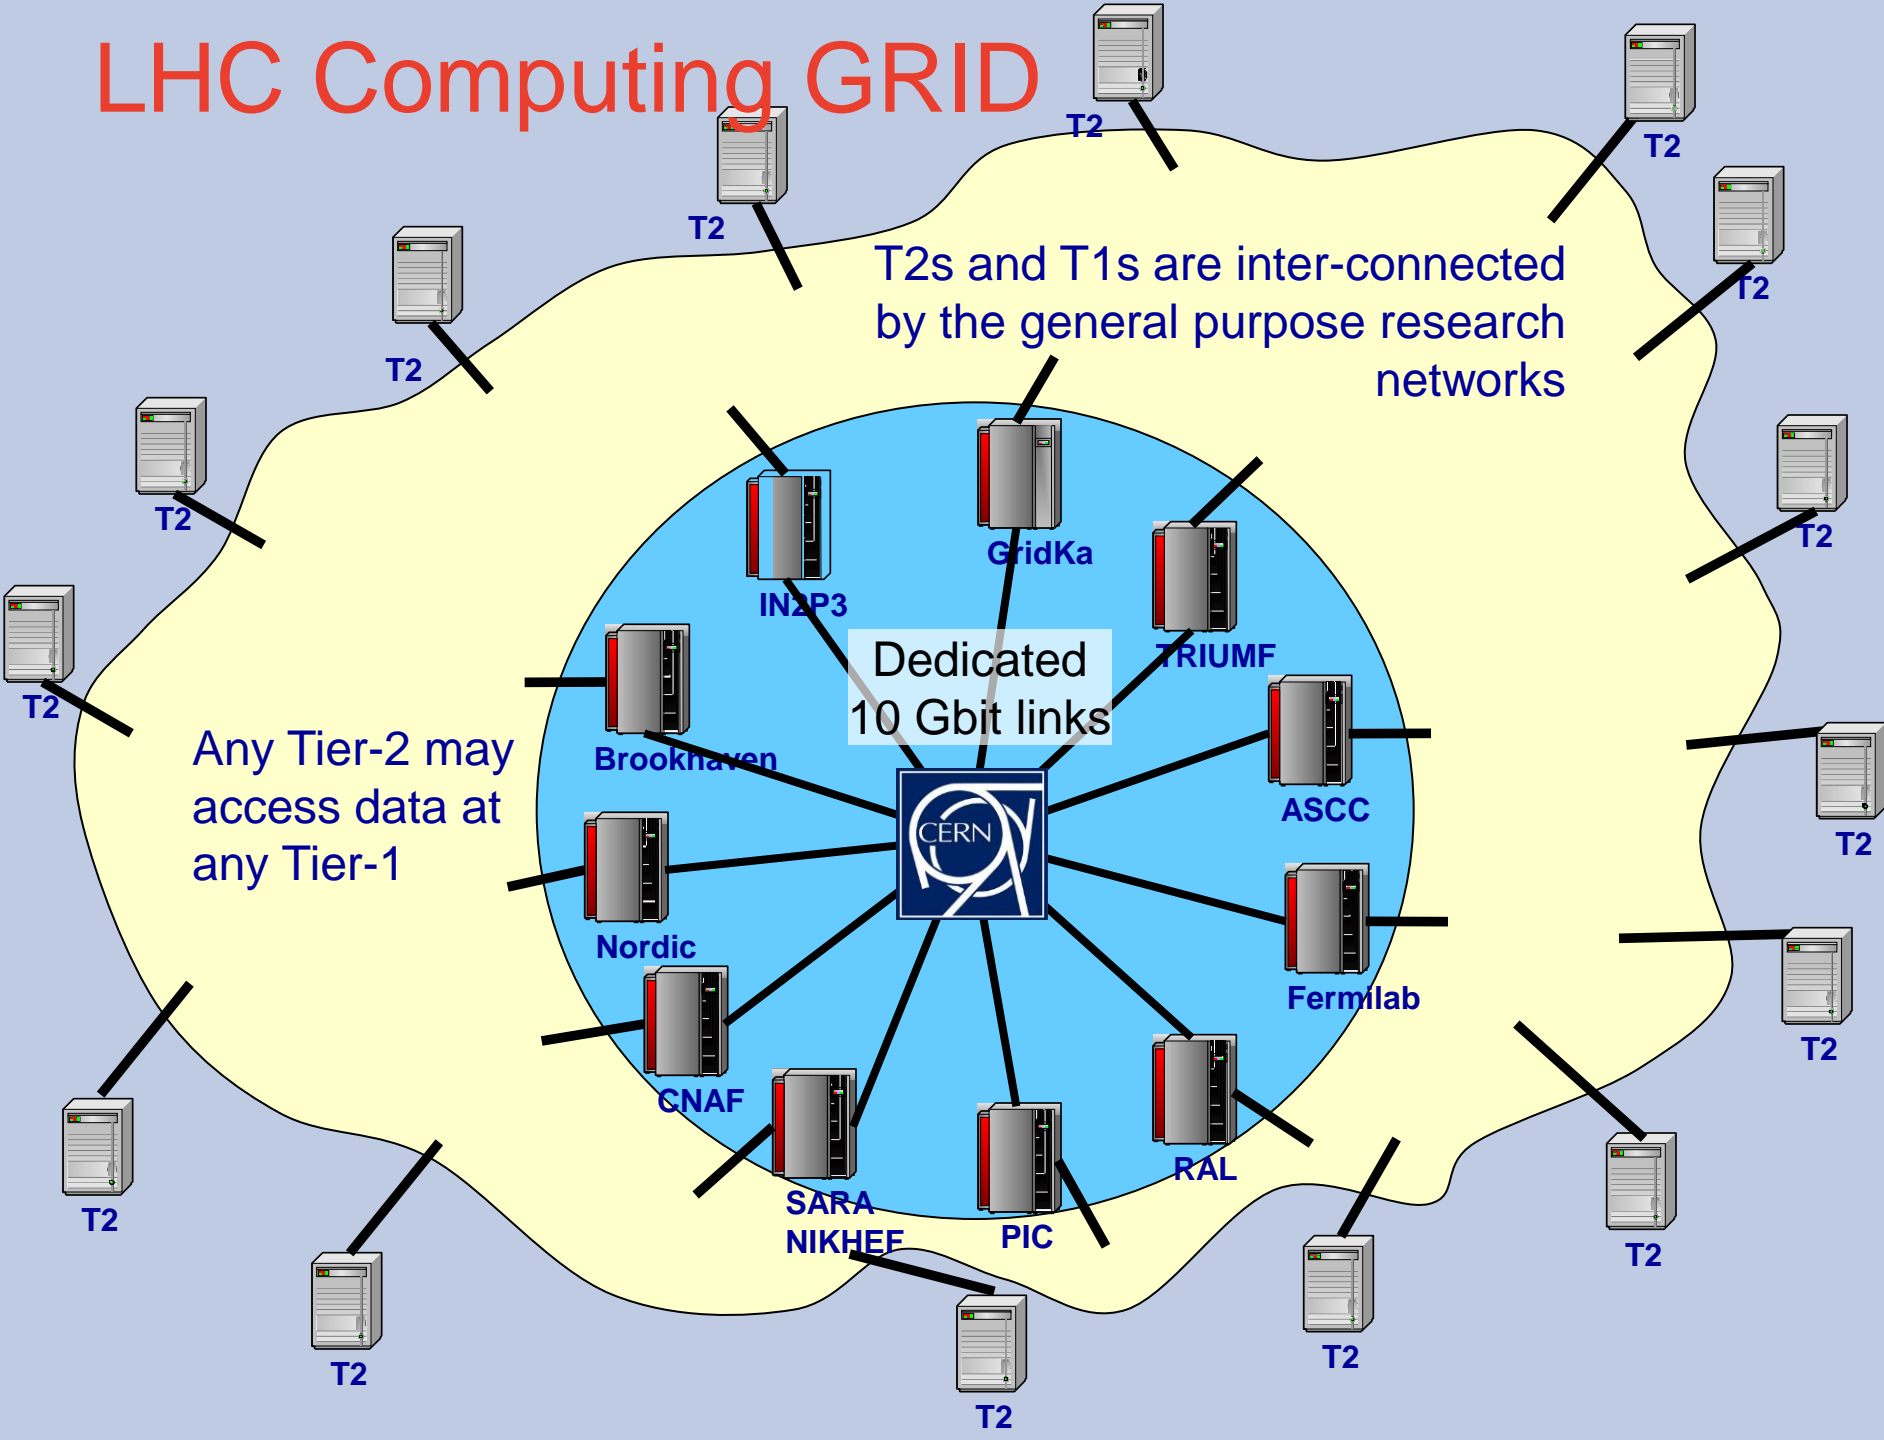

New particle ???

Reconstructed tracks with $p_t > 25$ GeV

LHC Computing GRID

LHC Computing GRID

Three main challenges of the LHC Project

First: Construct a 2x7 TeV proton collider using existing tunnel of 27 km circumference (tunnel diameter 3.8 m).

Solution: Innovative design of superconducting magnets bending the beam to the tunnel radius, and cooled with superfluid helium.

Second: Construct detectors with unprecedented granularity, dimensions and rapidity of registration. **Solution:** Innovative detector types, new materials, giant superconducting magnets, fast electronics for events registration....

Third: Develop a new computing system to handle and analyze enormous amount of data. . **Solution:** LCG – LHC Computing GRID – distributed computing concept.

ALL THE THREE REQUIRED GLOBAL COLLABORATION !

CERN was founded in 1954: 12 European States

“Science for Peace”

Today: 20 Member States

~ 2300 staff

~ 790 other paid personnel

> 10000 users

Budget (2011) ~1000 MCHF

20 Member States: Austria, Belgium, Bulgaria, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Netherlands, Norway, Poland, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom

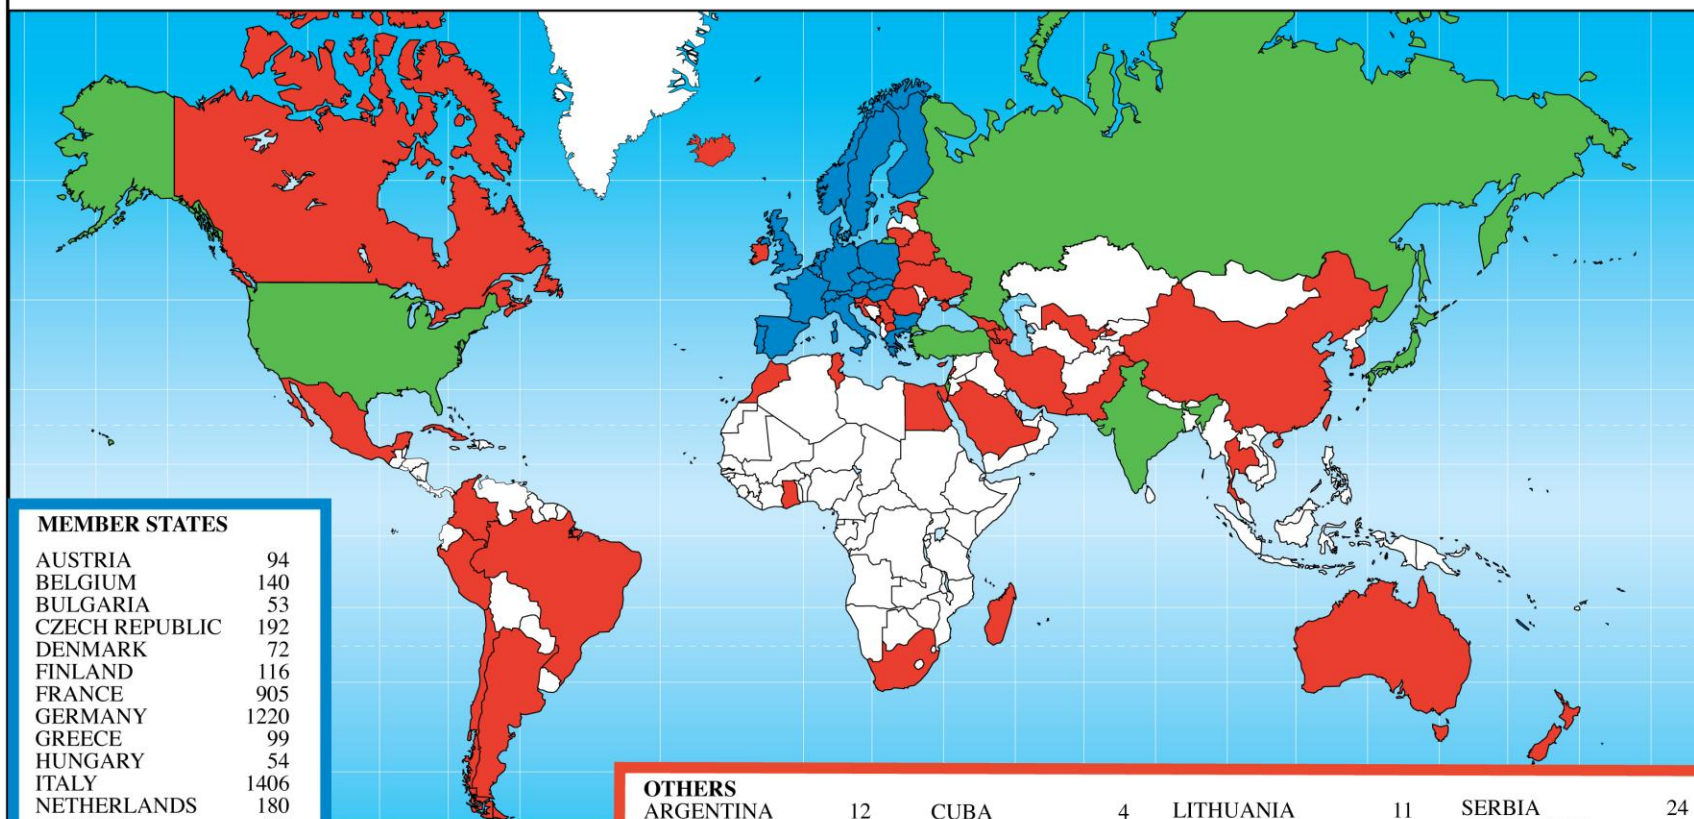

1 Candidate for Accession: Romania

1 Associate Member State: Israel (since 12 October 2011)

4 Applicant States: Cyprus, Serbia, Slovenia, Turkey

8 Observers to Council: India, Israel, Japan, the Russian Federation, the United States of America, Turkey, the European Commission and UNESCO

Distribution of All CERN Users by Nation of Institute on 27 June 2011

MEMBER STATES

AUSTRIA	94
BELGIUM	140
BULGARIA	53
CZECH REPUBLIC	192
DENMARK	72
FINLAND	116

Participation of Non-Member States in CERN scientific programmes

- **CERN is financed by 20 Member States, with annual contributions proportional to the Net National Income (or GDP), but has scientific and educational links with nearly 100 countries!**
- **Non-Member States participate in financing selected Projects**
- **Over 40 Non-Member States participated in the LHC construction, providing around 1/6 th of its cost and over 3000 of physicists and engineers (over 1/3 of the total);**

Contribution of CIS countries to LHC

(CIS - Содружество Независимых Государств, СНГ)

Important contribution of the Russian Federation

Highly appreciated contribution of other CIS countries.

Important role of JINR - Dubna in creating LHC collaborations with CIS countries →

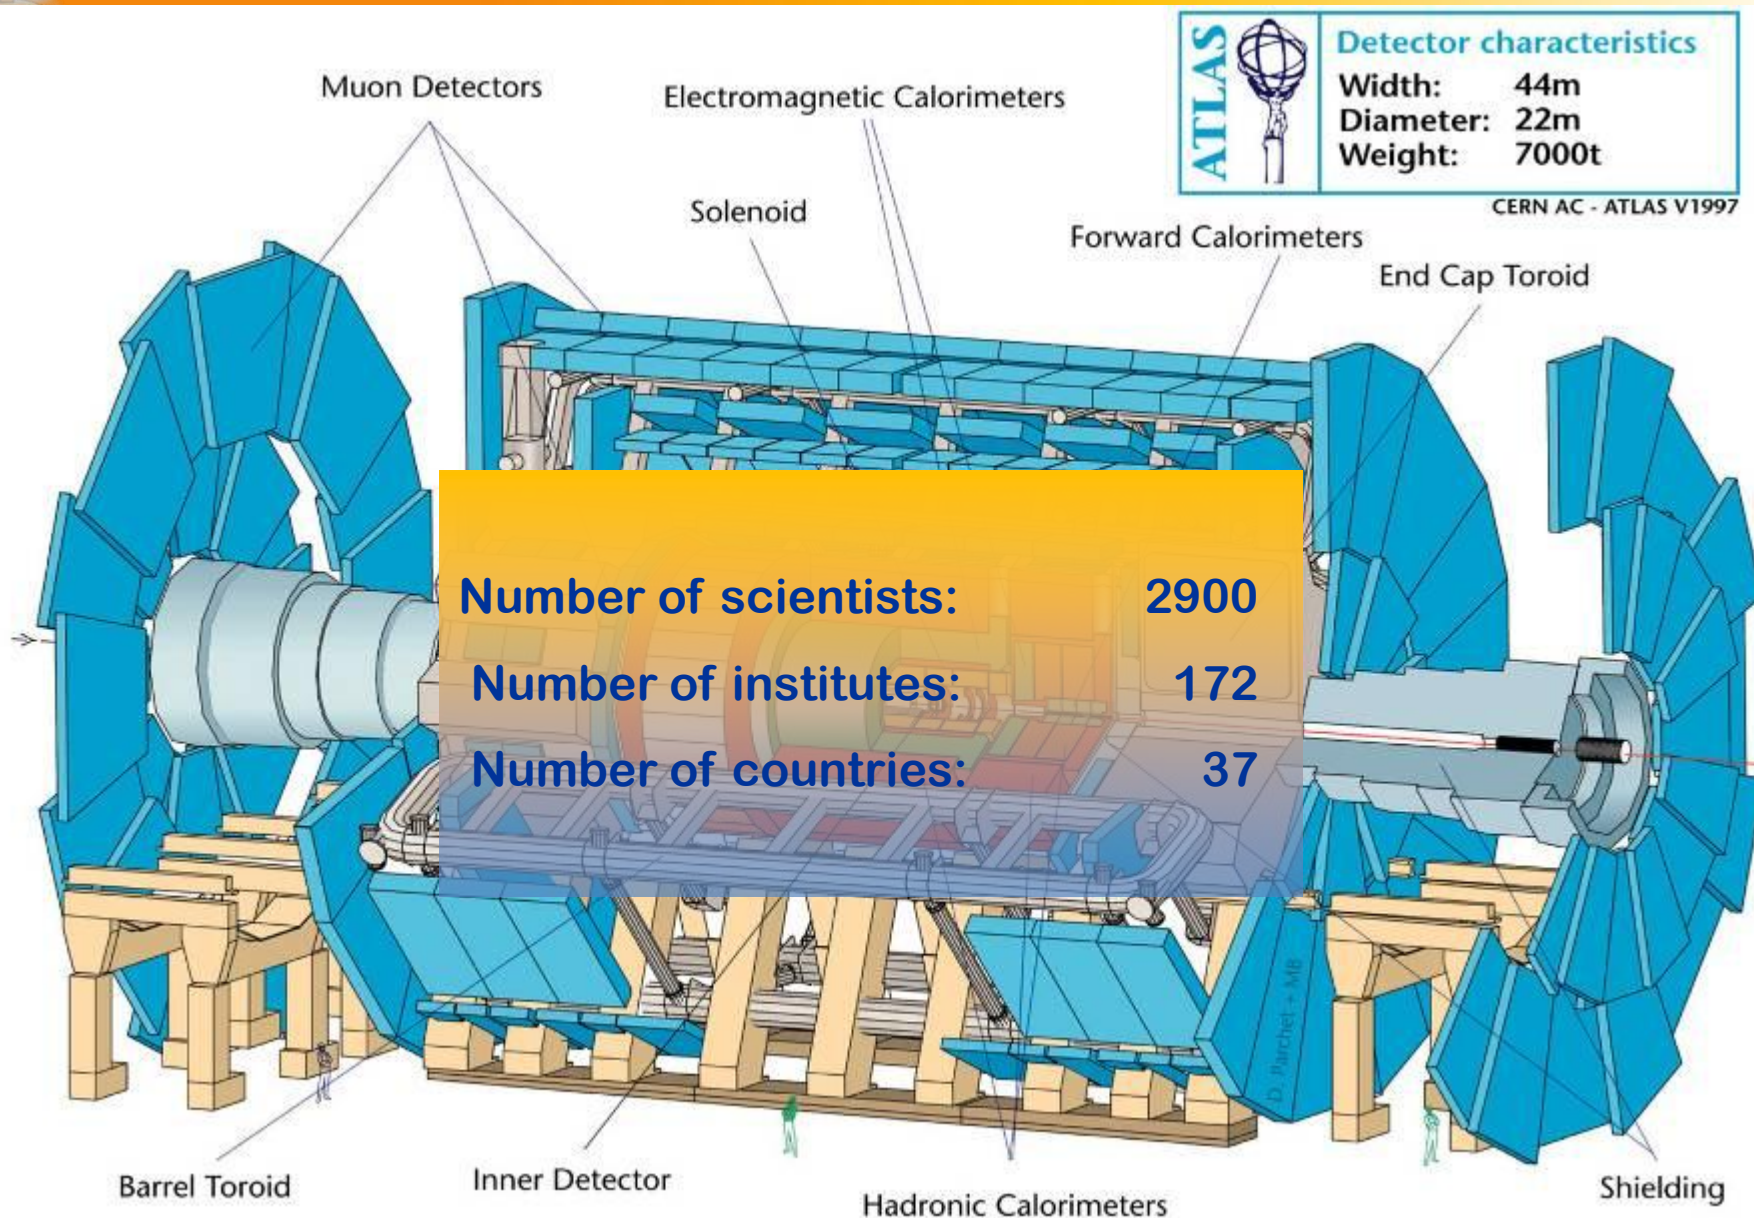

**Armenia, Azerbaijan, Belarus, Georgia, Ukraine
(and also other JINR Members!)**

LHC Machine - Vital Contribution of Non-Member States: Canada, India, Japan, Russia, US

The ATLAS Detector (Spokesperson F. Gianotti)

Point 1 - UX15 vault demolition of central pillar - September 20, 2000 - CERN ST-CE

Point 1 - UX15 cavern - Concreting of vault panel n°2 - April 10, 2001 - CERN ST-CE

LHC Point 1 - UX 15 Cavern - Concrete walls 6th lift - 20-02-2003 - CERN ST-CE

Contribution of CIS countries to LHC

(CIS = Содружество Независимых Государств, СНГ)

Physicists and engineers from CIS countries have notably contributed to the construction of all LHC experiments (ATLAS, ALICE, CMS, LHCb) and to the LHC accelerator

Unique Technologies developed for LHC

Example: SCINTILLATING CRYSTALS - monocrystals of PbWO_4 developed and produced in Russia - the main elements (70'000 pieces!) in the Compact Muon Solenoid (CMS) detector at the CERN Large Hadron Collider (LHC)

CERN - JINR co-operation for NICA Project

CERN-JINR 2010 co-operation agreement signed

CERN NA48 drift chambers as contribution to the NICA detector complex: delivered to Dubna

Common R&D on accelerators:

- Experimental studies of stochastic and electron cooling of ion bunched beam @ LEIR and Nuclotron;
- Problem of electron clouds in cyclic accelerators and ultra high vacuum technologies;
- Technologies of HV kickers and beam diagnostics of a high sensitivity.

AIS and EVM systems:

AIS - for JINR, **EVM** - for NICA

AIS: Administrative Information System

EVM: Earned Value Management

1st school JINR-CERN on EVM: Dubna, Oct 2010

2nd school JINR-CERN on EVM: Dubna, Oct. 2011

CERN – world biggest accelerator complex

PA 312 3T

DANGER
RADIATION
200A

**PS - 50
years
of service!!**

CERN accelerator complex, working not only for LHC

ISOLDE fed by
PSB proton beams;
1967 upgrade 1992.
**Now HIE-ISOLDE
Project!!**

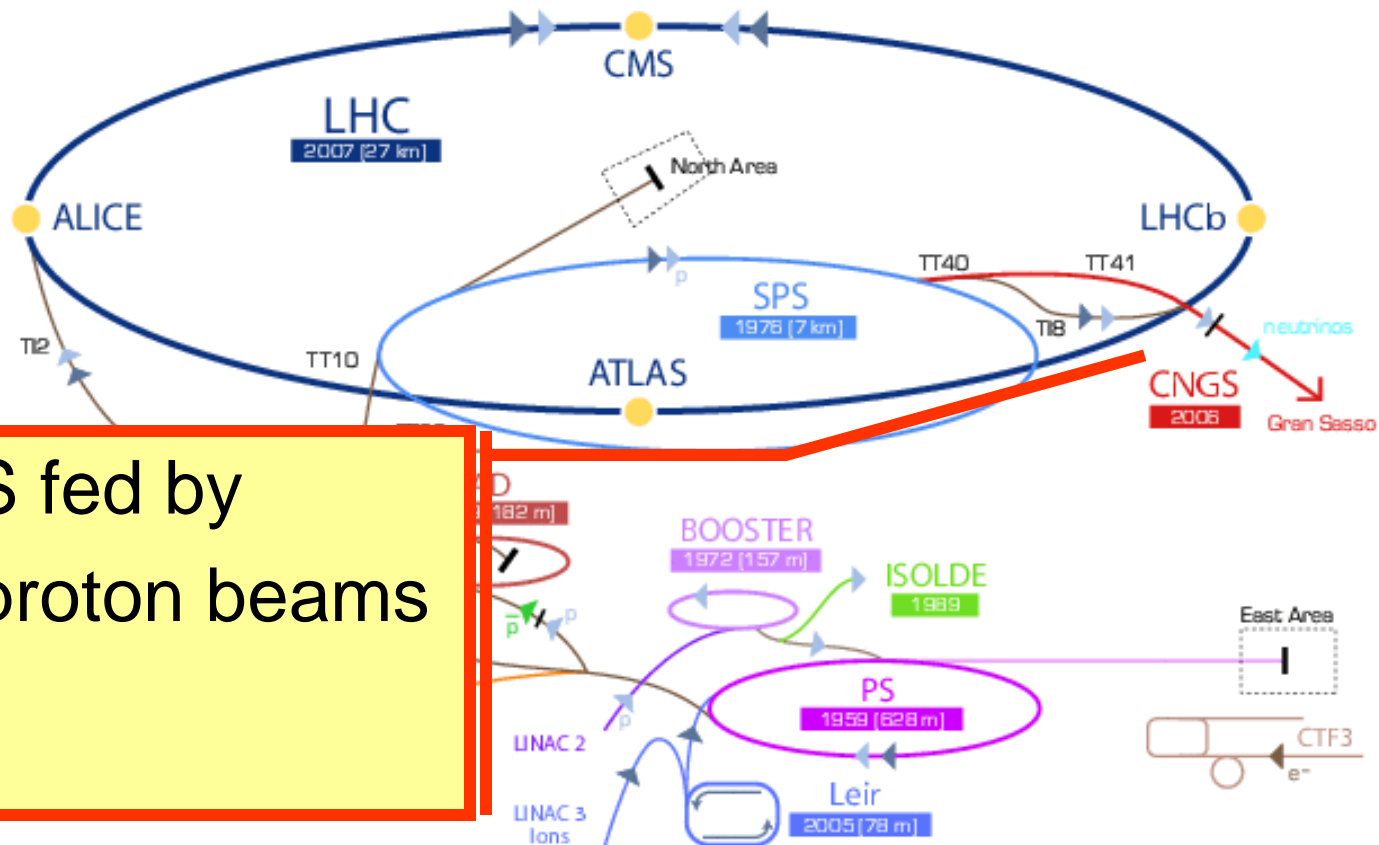

ISOLDE - Isotope Separator On Line, and REX - Radioactive beam Experiment

**An alchemical factory
for nuclear physics**

Low-energy beams of radioactive isotopes - atomic nuclei. The facility, located at the Proton-Synchrotron Booster (PSB), is like a small alchemical factory, changing one element to another. It produces a total of more than 1000 different isotopes for a wide range of research.

CERN accelerator complex, working not only for LHC !

CNGS fed by
SPS proton beams

▶ p [proton] ▶ ion ▶ neutrons ▶ \bar{p} [antiproton] ▶ \rightarrow proton/antiproton conversion ▶ neutrinos ▶ electron

CNGS – CERN Neutrino to Gran Sasso experiment

- investigation of the nature of neutrinos

CERN sends muon neutrinos to the Gran Sasso National Laboratory (LNGS), 732 km away in Italy. There, two experiments, OPERA and ICARUS, wait to find out if any of the muon neutrinos have transformed into tau neutrinos. To create the neutrino beam, a proton beam from the [Super Proton Synchrotron](#) (SPS) is used.

CERN Technologies - Innovation

Example: medical application

Accelerating
particle beams

Tumour Target

Charged hadron beam that
loses energy in matter

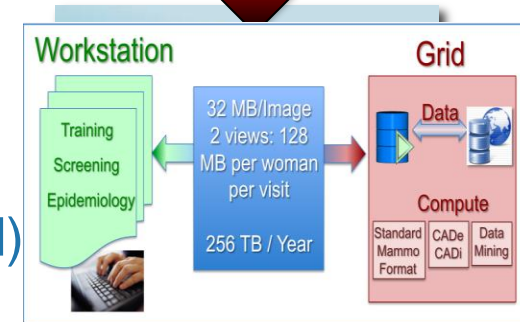

Medical imaging

Detecting particles

Large-scale computing (Grid)

Grid computing for medical data management and analysis

CERN Technologies and Innovation

Example: Medical applications

Combining Physics, ICT, Biology and Medicine to fight cancer

Hadron Therapy

Accelerating particle beams
~30'000 accelerators worldwide
~17'000 used for medicine

Leadership in Ion Beam Therapy now in Europe and Japan

>70'000 patients treated worldwide (30 facilities)
>21'000 patients treated in Europe (9 facilities)

Imaging

PET Scanner

Clinical trial in Portugal for new breast imaging system (ClearPEM)

Brain Metabolism in Alzheimer's Disease: PET Scan

Detecting particles
