Vote Conseil du Personnel

Submitted by Catherine Regel... on Tue, 21/02/2012 - 13:39

La proposition de la Direction est basée sur des calculs actuariels de type assurance effectués par l'actuaire de la Caisse de pensions.

Pour ses évaluations l'actuaire a utilisé les dernières tables de longévité générationnelles disponibles adaptées à la population du CERN et a déterminé d'une façon prudente pour des personnes recrutées à l'âge moyen du CERN (33 ans) quel serait le taux de cotisation nécessaire pour financer la promesse de pensions qui leur est faite. Le résultat, 31,6%, est proposé comme taux de cotisation demandé aux nouveaux titulaires.

Ceci correspond à la question restée ouverte dans le décision du Conseil du CERN en juin 2011 et clôt donc le paquet.

Dans la déclaration, dont le projet est ici, vous verrez que l'AP dit privilégier le statu quo, et qu'en tous cas, dans les études actuarielles futures, l'effet des nouvelles tables de longévité (et tout autre évolution de paramètres) doit être prise en compte pour toute la population de la Caisse pour déterminer le niveau juste de toutes les parties concernées. Si vous le désirez, vous pouvez faire des suggestions d'amélioration de texte (à michel.goossens@cern.ch).

Conclusion

- Each webform had to be created from scratch
- One problem remained unsolved: the confirmation of the vote
