Studies of rare Bs and B0 decays to dimuons at CMS

Friday, 19 July 2013 15:00 (15 minutes)

Rare beauty meson decays $B_{s,d} \rightarrow \mu^+ \mu^-$ are searched in pp collisions at LHC using a data sample collected by the CMS experiment. These decays are highly suppressed in the standard model. They can only proceed through the flavor-changing neutral currents, which are forbidden at tree-level diagrams. These decays are an excellent probe to the new physics; any difference between the measured branching fraction and the standard model prediction could provide a smoking gun signal of new physics.

Primary author: Dr BORRAS, Kerstin (Deutsches Elektronen-Synchrotron (DE))

Presenter: LANGENEGGER, Urs (Paul Scherrer Institut (CH))

Session Classification: Flavour Physics and fundamental symmetries

Track Classification: Flavour Physics and Fundamental Symmetries
