

WLCG Ops Coordination

Alessandra Forti
GridPP Ops Meeting
19th February 2013

WLCG Ops Coord

- Main meeting and Task Forces meeting listed here
<https://indico.cern.ch/categoryDisplay.py?categId=4372>

- Effort to involve T2 more

Plan to have T2 representatives from each country

Need to discuss with experiments how best to choose them from their most active

RAL T1 well represented at the last meeting with at least 3 people

- UK T2 should also try to participate

Added a chat to the meeting to make it easier to leave comments from remote sites

HEPOS_libs

- A new rpm for SL6 was produced but placed in a CERN repository non accessible by other sites
- Raises the question if we need a repository for experiment rpms such as HEPOS_libs
- Other rpms not included in the meta rpm occasionally pop up

See N2N library for xrootd requested by atlas

- There are also experiments tools it is worth to know about

Do we need a repository or available docs for those too?

- TF proposed to look into common/similar rpms/tools distribution.

Discussed at the next meeting

SL6 migration coord

- SL6 migration was discussed at the last meeting because lxplus administrators want to upgrade.

Some sites also want to upgrade

Some sites would like to breath after EMI-2

- Experiments not all completely at ease with a rushed move

Moriond, people busy, etc

- Need coordination so Task Force was proposed to coordinate experiments, T1 and T2s

Provisional target date for the upgrade September

TF creation to be discussed at the next meeting
