Management
Workshop

AMMW 2013
15th November 2013

Safety Organization of the ATLAS experiment

- Many conventional risks in the same place
- Many specific risks in the same place
- Projects to define solutions in radioactive environments (live biometry monitoring and remote handling)

Maintenance in the CERN cooling and ventilation group

- KPIs calculated based on WO data
- Importance of quality and completeness of data in WOs for KPIs calculation
- Mobile devices application
- Online vibration analysis

LS1 maintenance for the cryogenic installations

- Very good performance (~92% availability)
- Systematic analysis of origins of downtimes
- Maintenance plans defined in details through BOM, procedures & schemes
- Offline vibration analysis

Inspections of EN/EL transformers

- Periodic interventions on transformers
~preventive
- List of parameters evaluated or measured
- Triggers corrective interventions
- Parameters automatically analyzed

Maintenance of Power Conv. based on Failures Data

- Analysis of failures data to optimize maintenance
- Weibull approach to detect obsolescence of diodes based on 5 defects out of 10'000 diodes
- Triggers replacement plan for diodes
- Importance of completeness and quality of data

Spare part management in the EN-CV group

- Important number of references to manage
- Workflow based on pick tickets for traceability
- Efforts put on improvement of stock thanks to KPIs and standardization

Contract management, contract adjudication, outsourcing

- Presentation of the Best Value for Money method
- Method evaluating bid mark adding price mark and quality mark
- 41 contracts adjudicated since 2008 out of 78 contracts at CERN
