

Enabling Grids for E-science

Εισαγωγή στο EGEE και το HellasGrid

Introduction to EGEE and HellasGrid

Athanasia Asiki

aassiki@cslab.ece.ntua.gr

***Computing Systems Laboratory,
National Technical University of Athens***

www.eu-egee.org

Information Society
and Media

- The *World Wide Web* provides seamless access to information that is stored in many millions of different geographical locations
- The *Grid* is an emerging infrastructure that provides seamless access to computing power and data storage capacity distributed over the globe

- **Collection of geographically distributed heterogeneous resources**

“Most generalized, globalized form of distributed computing”

- **“An infrastructure that enables flexible, secure, coordinated resource sharing among dynamic collections of individuals, institutions and resources”**

Ian Foster and Carl Kesselman

- **Offers access to a virtual and very powerful computing system**
- **A user does not care, in which resource his / her job / jobs is going to be executed**

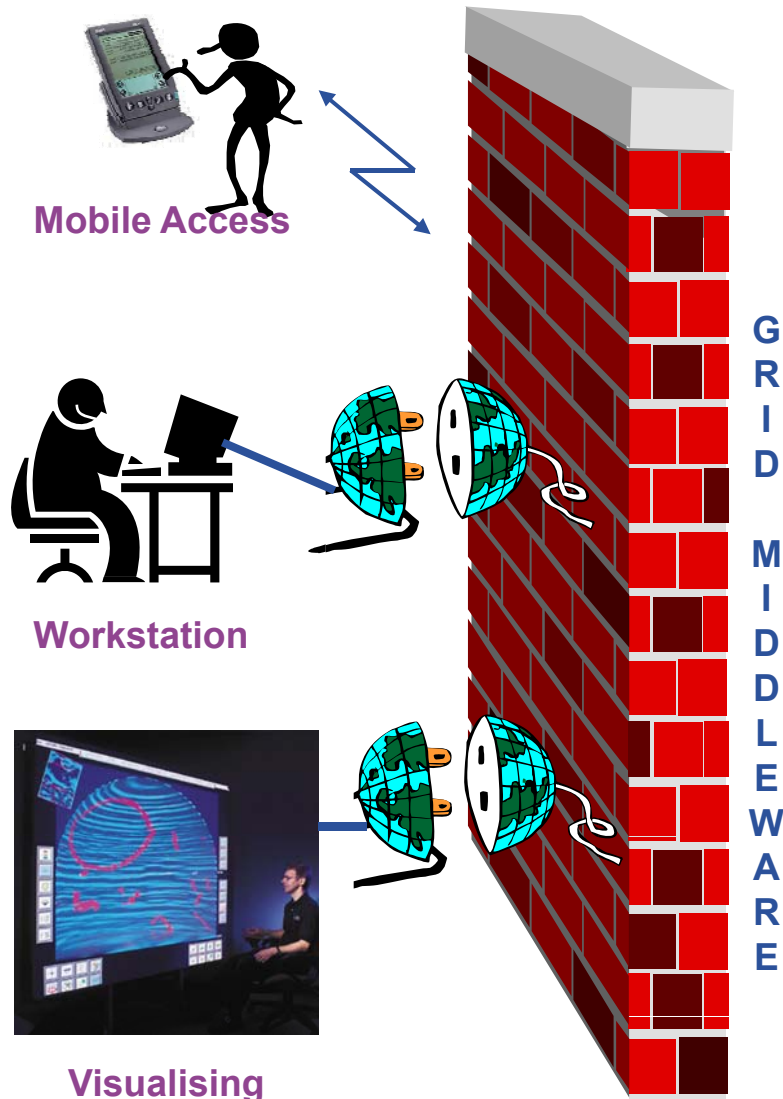

- An entity that is going to be shared

such as:

- ✓ Computational units
- ✓ Storage units
- ✓ Software

- **Resource sharing**
 - Geographically distributed resources offer computational power, storage capacity and bandwidth to the users
- **Secure and reliable access**
 - Authentication
 - Authorization
 - Access policy
- **Open standards**
- **Co-operation among people belonging to different organizations, institutes, groups**

- **Development of networking technology (doubling every nine months or so over the last years) and high-speed networks**
 - ✓ **widespread penetration of optical fibers**
 - ✓ **wireless connections**
 - ✓ **new Internet technologies (ADSL, WiMax)**

- **Moore's law everywhere**
 - ✓ **Instruments, detectors, sensors, scanners, ...**
 - ⇒ **Organising their effective use is the challenge**

- **Applications require a huge amount of computations to be executed and the collaboration among scientists**

Triumph of Light – *Scientific American*. George Stix, January 2001

- **Science that became feasible and promiscuous by resource sharing (sharing of data, scientific instruments, computational resources, colleagues) across the Internet**
 - ✓ Often very compute intensive
 - ✓ Often very data intensive (both creating new data and accessing very large data collections) – data deluges from new technologies
 - ✓ **Crosses organisational and administrative boundaries**

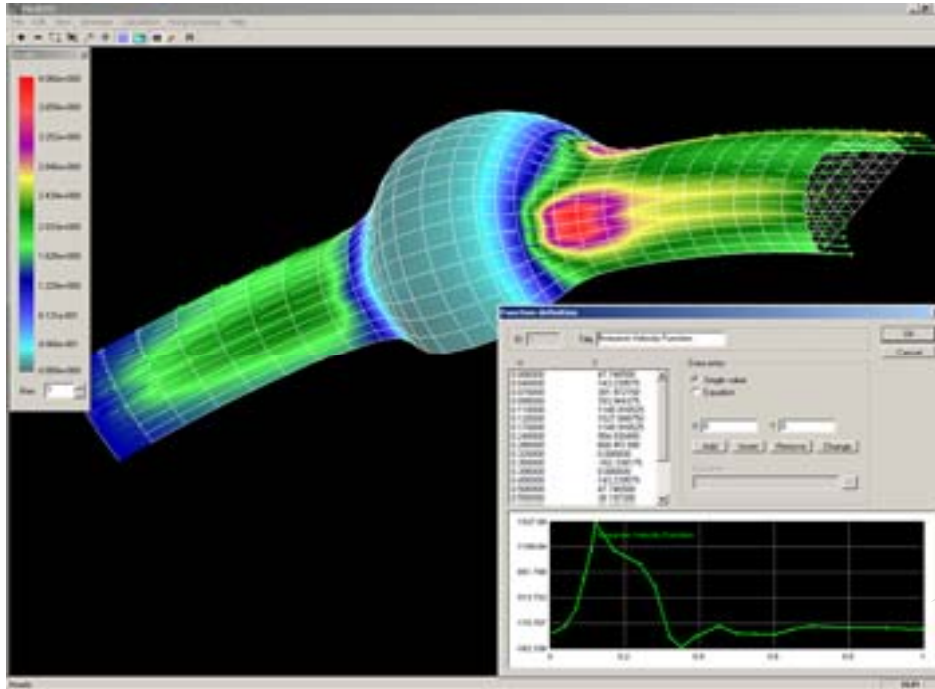

ArchaeoGrid

Create a computer model that weaves together data from many sources and predicts feedback interaction

LOOKING

Observe and analyze data streams in real time. A sensor grid with thousand of different sensors providing real time data and measurements from ocean-going researchers enabling an enormous data grid infrastructure.

Parallel Blood Flow Simulation

Allows surgeons to perform virtual virtual stent surgery until they get it just right. It combines parameters such as blood velocity and pressure with a series of medical images to automatically create a 3D computational model.

ViroLab

Aims to create a collaborative virtual laboratory for grid-based decision support for viral disease treatment. HIV treatment in the increasingly common case of HIV drug resistance is mainly studied. ViroLab “vertically” integrates biomedical information relating to viruses, patients and literature resulting in a rule-based decision support system for drug ranking.

GEANT2

Budget: 178.643.730 €
Duration: 4 years

“GÉANT2 is the seventh generation of pan-European research and education network, successor to the pan-European multi-gigabit research network GÉANT”

European Commission
Information Society
and Media

<http://www.geant2.net/>

- The project officially started on 1 September 2004 and will continue to take place for the next 4 years
- The project is supported by the European Committee and by 30 European National Research and Education Networks (NRENs) in 34 countries and is administrated by DANTE (*Delivery of Advanced Network Technology to Europe*).
- It provides services of high quality and readability in the European Education and Research community and connects all the National Research Networks of European Union, Centre and East Europe, Israel and Cyprus

- It provides:
 - Basic IPs services
 - Quality of service levels
- Two main services:
 - Routed (Internet) and switched (L1-L2)
- Backbone mixed:
 - Part of will be based on dark fiber
 - Part of it on leased services
- Greece interconnection:
 - 2 * 10Gbps lambdas

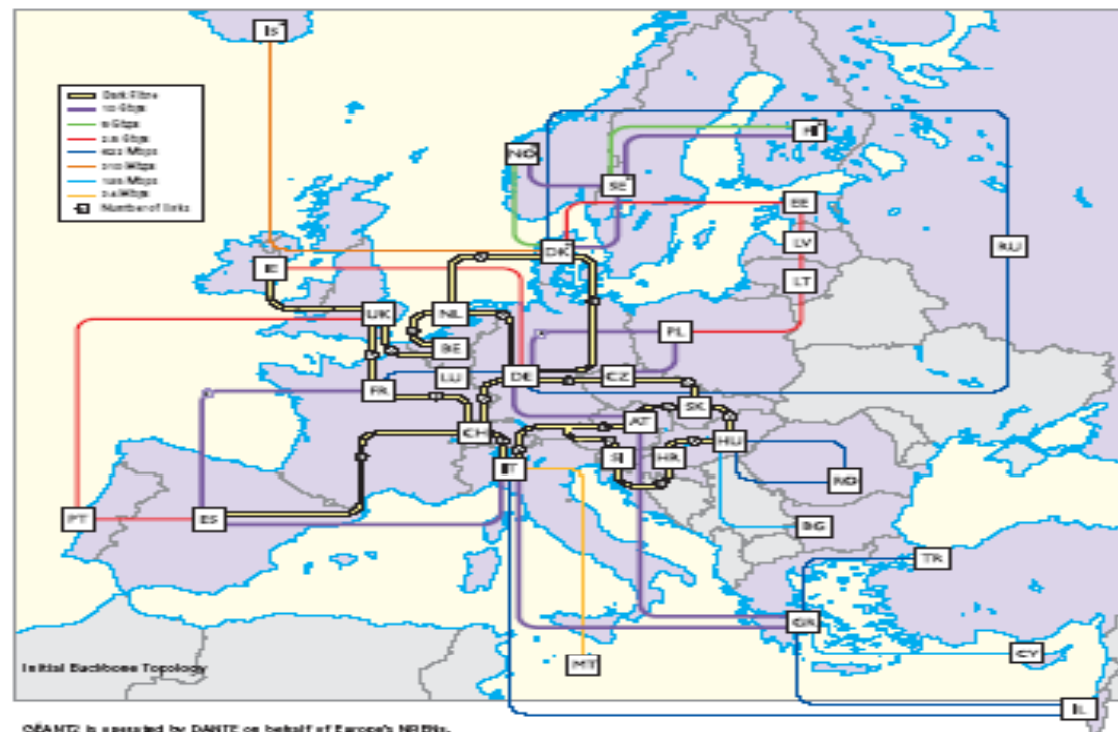

GÉANT2

The world-leading research and education network for Europe.

★ Connect ★ Communicate ★ Collaborate

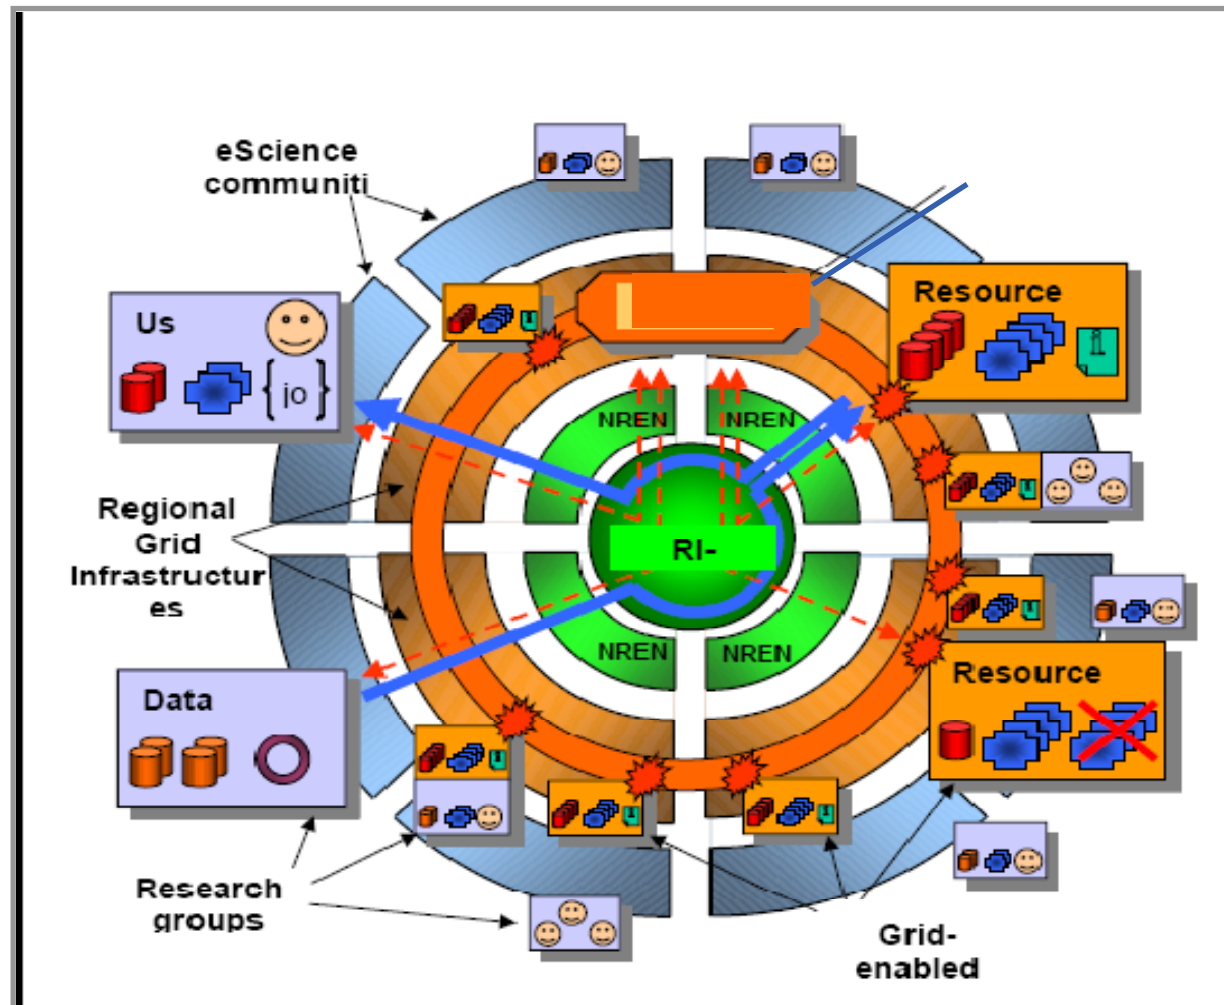

GÉANT2 is operated by DANTE on behalf of Europe's NRENs.

AT Austria	CY Cyprus	ES España	FR France	GR Greece	IE Ireland	IT Italia	LU Luxembourg	NL Nederland	PL Polska	PT Portugal	RO România	SK Slovakia	TR Türkiye	UK United Kingdom
------------	-----------	-----------	-----------	-----------	------------	-----------	---------------	--------------	-----------	-------------	------------	-------------	------------	-------------------

GÉANT2 is co-funded by the European Commission
its 6th R&D Framework Programme.

Key

-  • User
-  • Storage
-  • CPU/processing
-  • Information
-  • Instrumentation
-  • User data flow
-  • Requests, information, monitoring and control

LHC (Large Hadron Collider)

- LHC will collide beams of protons at an energy of 14 TeV
- If the Higgs boson exists, the LHC will almost certainly find it!
- *Four experiments, with detectors:*

ALICE

ATLAS

CMS

LHCB

Starting from this event (particle collision) ...

- ✓ Data Collection
- ✓ Data Storage
- ✓ Data Processing

You are looking for this “signature”...

• *Selectivity: 1 in 10¹³*

✓ *Like looking for 1 person in a thousand world populations!*

✓ *Or for a needle in 20 million haystacks!*

- The LHC Computing Grid Project (LCG) was born to prepare the computing infrastructure for the simulation, processing and analysis of the data of the Large Hadron Collider (LHC) experiments.
- ⇒ The processing of the enormous amount of data, that will be generated, will require large computational and storage resources and the associated human resources for operation and support.
- ⇒ Preparation of a common infrastructure of
 - ✓ libraries
 - ✓ tools
 - ✓ frameworks
 required to support the physics application software

- **Virtual Organization**

“A set of individuals and / or institutions defined by highly controlled sharing rules, with resource providers and consumers defining clearly and carefully just what is shared, who is allowed to share and the conditions under which sharing occurs”

Ian Foster

- **Abstract entities grouping users, institutions and resources in the same administrative domain**

- ↳ **What is going to be shared ?**

- ✓ resources

- ✓ software

- ✓ special equipment

- ✓ licenses

- ✓ services

- ✓ Internet bandwidth

- **Associated with LHC experiment**
 - ALICE ⇒ ALICE experiment
 - ATLAS ⇒ ATLAS experiment
 - CMS ⇒ CMS experiment
 - DTEAM ⇒ Grid (LCG) Deployment Group
 - LHCb ⇒ LHCb experiment
 - SixTrack ⇒ Single Particle Tracking Code

CMS

LHCb

ATLAS

ALICE

- **Not associated with LHC experiment**

- Babar ⇒ Babar experiment
- D0 ⇒ D0 experiment
- H1 ⇒ H1 experiment
- Zeus ⇒ Zeus experiment
- ILC ⇒ ILC Community
- Biomed ⇒ EGEE Biomedical Activity
- ESR ⇒ Earth Science Research
- EGEODE ⇒ Expanding GEOsciences on Demand
- PhenoGrid ⇒ Particle Physics Phenomenology
- CompChem ⇒ Computational Chemistry
- SEE-VO ⇒ South Eastern Europe VO
- Hgdemo ⇒ Training events

- **List of existing VOs**

- https://lcg-registrar.cern.ch/virtual_organization.html

- **EGEE objective:**

“to establish a seamless European Grid infrastructure for the support of the European Research Area (ERA)”

- **EGEE:**

- Accomplished all of its objectives
- Scope expanded beyond Europe

- **EGEE-II start:**

- Full capacity from day one
- Large-scale, production-quality infrastructure
- Supporting a wide range of applications
- Staff with extensive knowledge of Grid technology

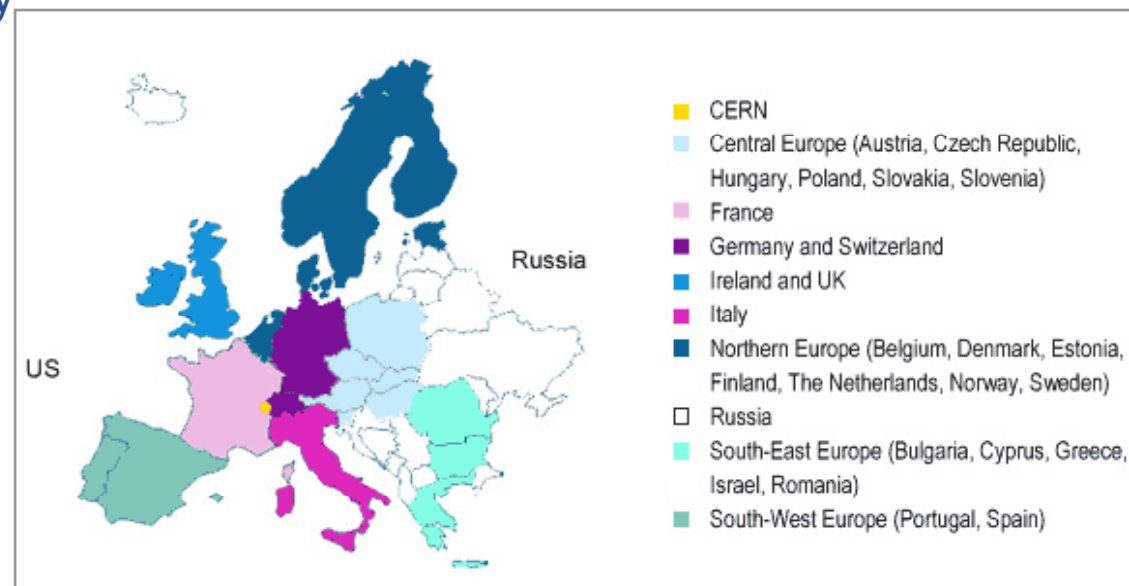

- **EGEE-II aims to provide a production quality Grid infrastructure across the European Research Area and beyond.**

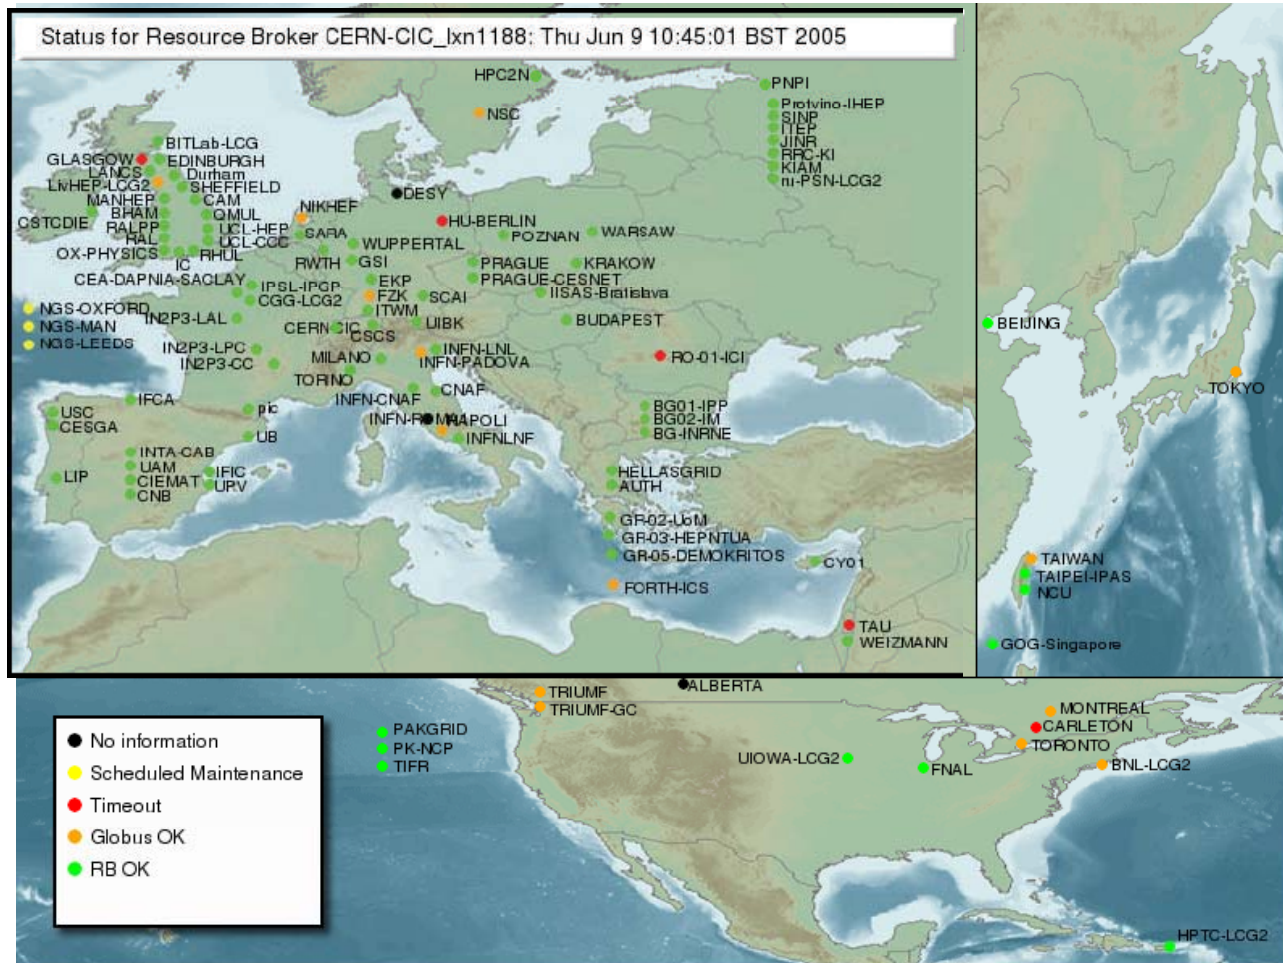

- ↪ Started on 1 April 2006
- ↪ Available infrastructure to the Research and Academic community 24 hours per day and 7 days per week

- ↪ Participants:
 - ✓ 90+ institutions
 - ✓ 46 countries

- ↪ Consists of:
 - ✓ 202 sites
 - ✓ ≈30.000 CPUs
 - ✓ ≈12.500TB

- **Mission:**
 - ✓ Manage and operate production Grid infrastructure for the European Research Area
 - ✓ Interoperate with e-Infrastructure projects around the globe (Open Standards-GGF) and Contribute to Grid standardisation efforts
 - ✓ Incorporate new users from the industry and from the research community as well assuring the best possible training and support
- **Support applications deployed from diverse scientific communities:**

✓ High Energy Physics	✓ Biomedicine
✓ Earth Sciences	✓ Astrophysics
✓ Computational Chemistry	✓ Finance, Multimedia
✓ Fusion	✓ Geophysics

...
- Prepare for a permanent/sustainable European Grid Infrastructure (in a GÉANT2-like manner)

- **Networking activities**

Include NA1 (Project Management), NA2 (Dissemination, Outreach and Communication), NA3 (User Training and Induction), NA4 (Application Identification and Support), and NA5 (Policy and International Cooperation)

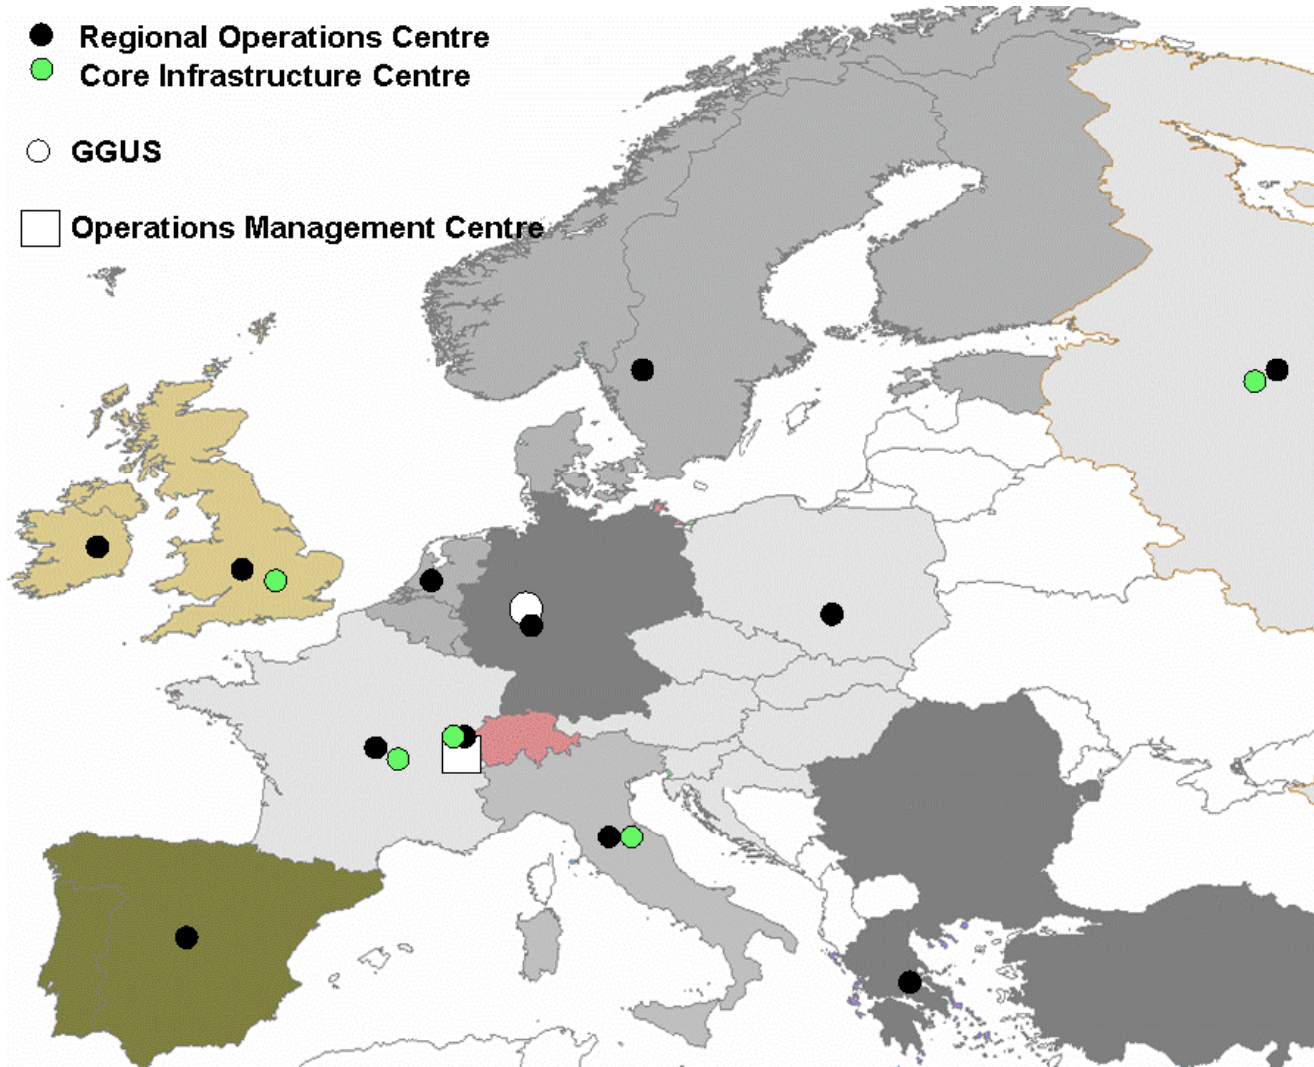

- **Service activities**

Consist of SA1 (European Grid Operations, Support and Management), SA2 (Networking Support) and SA3 (Middleware Integration, Testing and Certification) combining software elements from a variety of sources to provide integrated releases for deployment on the infrastructure

- **Joint Research activities**

JRA1 (Middleware Re-Engineering) will continue to develop and support the gLite middleware and JRA2 (Quality Assurance) will manage quality throughout the project, including overall security and coordination.

- Regional Operations Centre
- Core Infrastructure Centre
- GGUS
- Operations Management Centre

- **Operations Management Centre (OMC)**
 - At CERN – mainly

- **Core Infrastructure Centres (CIC)**
 - Administration of daily grid operations – oversight, troubleshooting
 - “Operator on Duty”
 - Deployment of infrastructure services
 - 2nd level support στα ROCs
 - UK/I, Fr, It, CERN, Russia, Taipei

- **Regional Operations Centres (ROC)**
 - Front-line support for user and operations issues
 - Provide local knowledge and adaptations
 - One in each region – many distributed

- **User Support Centre (GGUS)**
 - In FZK: provide single point of contact (service desk), portal

- Part of the EGEE project
- Next generation middleware for grid computing
- In its development participate 80 programmers from 12 different academic and industrial European centers
- *Provides services for computing element, data management, accounting, logging and bookeping, information and monitoring, service discovery, security, workload management*

- **Operating system:**
 - Linux (+GNU utilities), usually a RHEL3-like, for example Scientific Linux 3.0.7, Fedora Core 3, etc
- **Middleware:**
 - gLite v3.0 (LCG)
- **Libraries and Applications**
 - Defined by the system and VOs administrators' foresight
 - The user can install and execute its own programmes

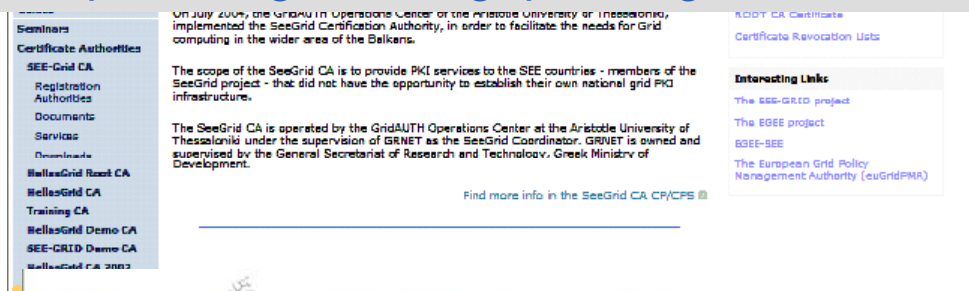

Each VO according to its needs installs experimental software:

- **ATLAS: atlas software (a big collection, v12.2.0 etc)**
- **CMS: cmkin, cobra, famos, geometry, ignominy, orca, oscar**
- **ALICE: alien, alice, root, proof**
- **LHCb: dirac, boole, DC, decfiles, gauss, paramfiles**
- **BIOMED: gate, cdss, gps@, gromacs, simri3d, gptm3d**
- **ESR: (earth science specific... eg, idl package)**

- **The users can negotiate with their VOs for the installation of needed software**

• <http://www.grid.auth.gr/pki/seegrid-ca/>

On July 2007, the GridAUTH Operations Center of the Aristotle University of Thessaloniki, implemented the SeeGrid Certification Authority, in order to facilitate the needs for Grid computing in the wider area of the Balkans.

The scope of the SeeGrid CA is to provide PKI services to the SEE countries - members of the SeeGrid project - that did not have the opportunity to establish their own national grid PKI infrastructure.

The SeeGrid CA is operated by the GridAUTH Operations Center at the Aristotle University of Thessaloniki under the supervision of GRNET as the SeeGrid Coordinator. GRNET is owned and supervised by the General Secretariat of Research and Technology, Greek Ministry of Development.

Find more info in the SeeGrid CA CP/CPS

EGEE Enabling Grids for E-science South East Europe

Path: Home page > Documentation > User documentation

User Documentation

Overview

Does the Grid sound complex and obscure? Want to know more? For complete beginners, please have a look at this introduction from CERN: <http://gridcafe.web.cern.ch/gridcafe/>

The following pages guide you through the process of using the Grid. The instructions cover three different kinds of perspective users:

1. New experimental users; and application.
2. New production users; those new to the regional Grid.
3. Experienced production users of the regional Grid.

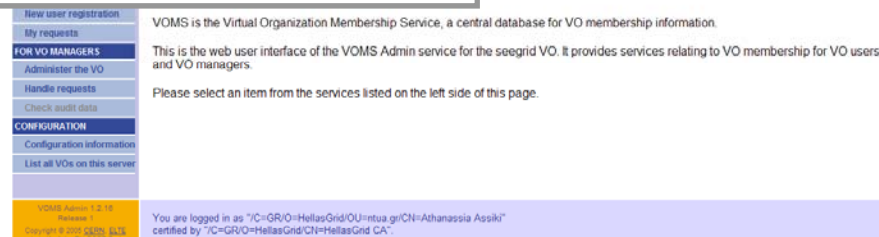

Also, this document gives the acceptable usage of the Grid.

The general documentation for user access to the Grid is available at sa1.web.cern.ch/egee-sa1/using.htm. Refer to this page if you are not familiar with how to access the grid.

If you are a cluster administrator (and want to know more about the Grid) refer to the Europe cluster RC Administrator's documentation [here](#)

• **EGEE Helpdesk:**

<https://helpdesk.egee-see.org/index2.php>

VOMS is the Virtual Organization Membership Service, a central database for VO membership information.

This is the web user interface of the VOMS Admin service for the seegrid VO. It provides services relating to VO membership for VO users and VO managers.

Please select an item from the services listed on the left side of this page.

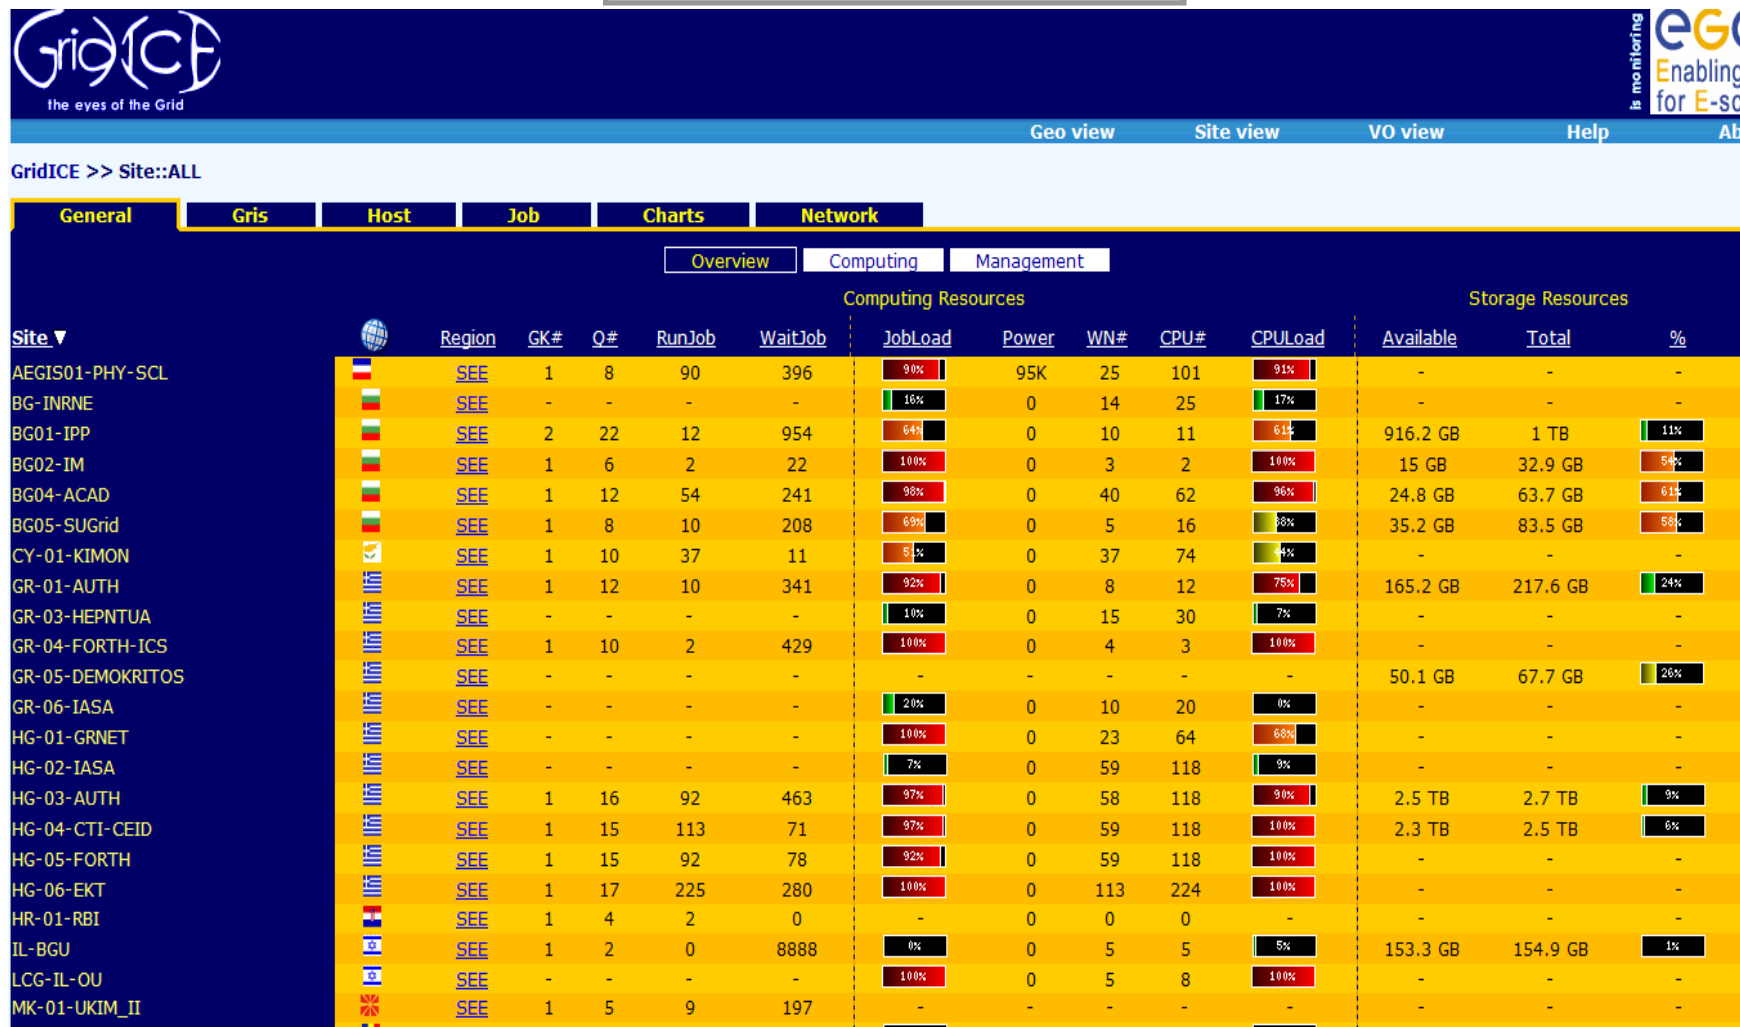

- New user registration
- My requests
- FOR VO MANAGERS**
 - Administer the VO
 - Handle requests
 - Check audit data
- CONFIGURATION**
 - Configuration information
 - List all VOs on this server

You are logged in as "7C=GR/O=HellasGrid/OU=ntua.gr/CN=Athanasia Aspiki" certified by "7C=GR/O=HellasGrid/CN=HellasGrid CA".

• http://www.egee-see.org/User_documentation.php

<http://mon.egee-see.org>

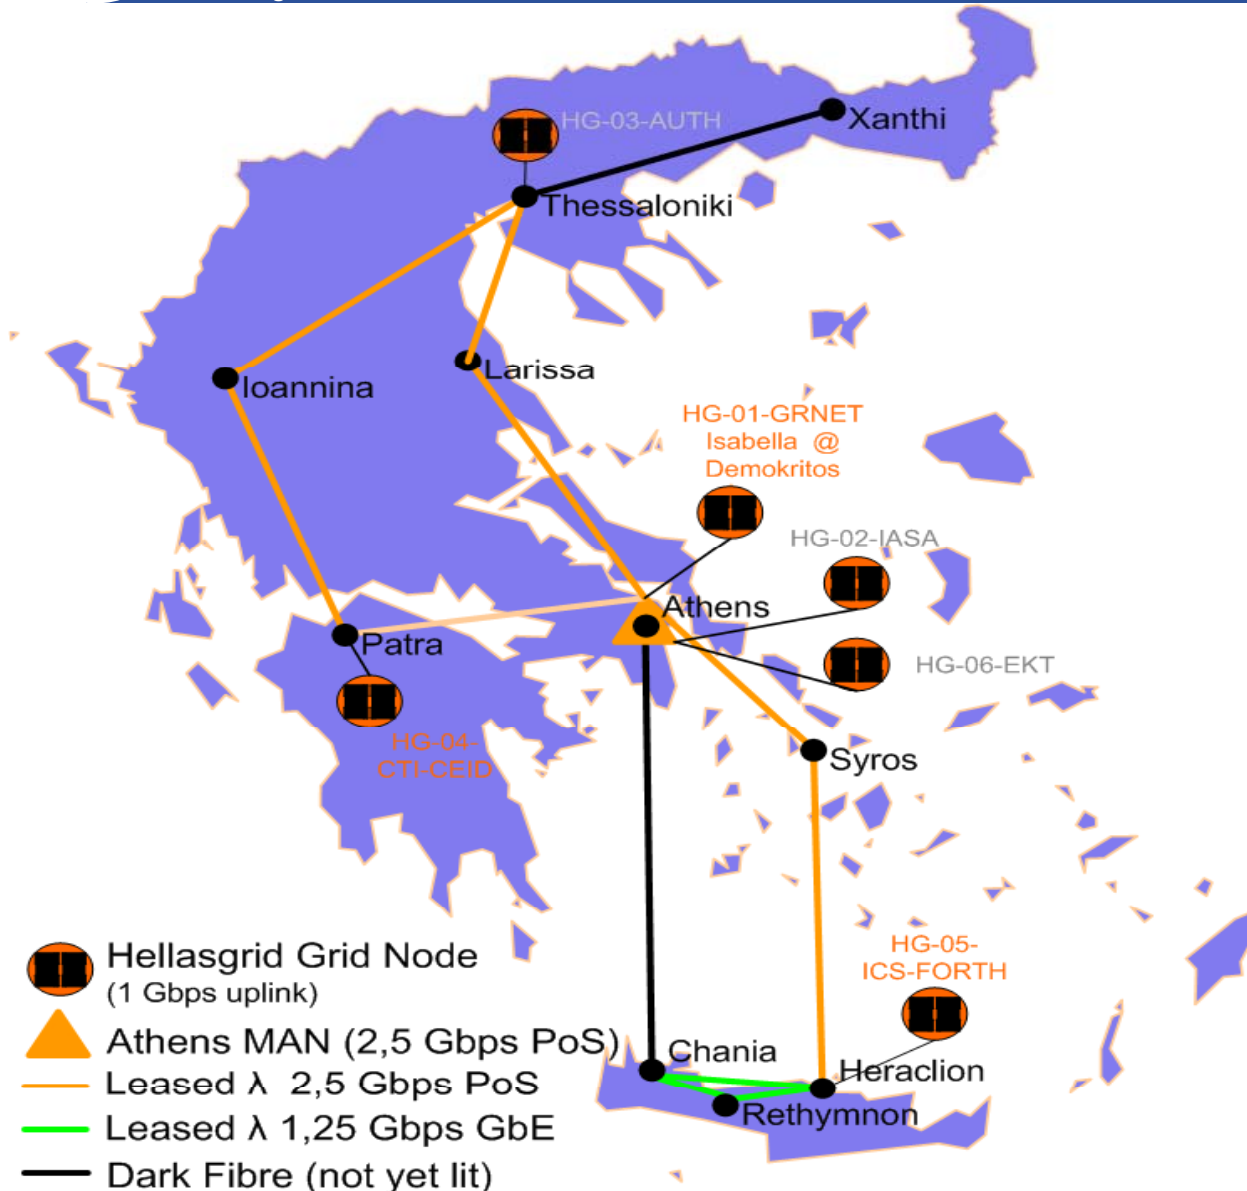

The screenshot shows the GridICE monitoring interface for the SEE region. It features a navigation bar with 'Geo view', 'Site view', 'VO view', 'Help', and 'About'. Below the navigation bar, there are tabs for 'General', 'Grids', 'Host', 'Job', 'Charts', and 'Network'. Under the 'Grids' tab, there are sub-tabs for 'Overview', 'Computing', and 'Management'. The main content area displays a table of computing resources, categorized into 'Computing Resources' and 'Storage Resources'.

- **HellasGrid I (500.000 €)**
 - Βρίσκεται στον Δημόκριτο, Αγία Παρασκευή (a.k.a. Isabella)
 - 34 dual Intel **P4 Xeon @ 2.8GHz, 1GB RAM, 2x 70GB SCSI HDD**, 2x Gbit
 - IBM FAStT900 Storage Area Network, ολοκληρωμένο σύστημα
 - 2x Redundant Fiber Channel Controllers with 1Gbyte Cache each
 - 70x146.8GB= **10,276TB raw storage capability**, over 5 disk shelves
 - Tape Library με δυνατότητα έως ~30 TBytes, integrated monitoring
 - Παραδόθηκε στο ΕΔΕΤ από την IBM κατά τον Δεκέμβριο του 2004
- **HellasGrid II (1.000.000 €)**
 - 5 φυσικοί κόμβοι: ΕΚΤ (>220), ΙΕΣΕ (48), ΑΠΘ (128), ΙΤΕ (128), ΙΤΥ (128)
 - ~700 Επεξεργαστές **x86_64, 2 GB RAM, 1x 80GB SATA HDD**, 2x Gbit
 - ~20 TBytes συνολικός αποθηκευτικός χώρος σε τεχνολογία SAN (5x 4TBs)
 - ~50 TBytes Tape Library, το οποίο έχει εγκατασταθεί στο ΕΚΤ
