

Dear Participants of the RD51 Electronics school FPGA beginners course,

in order to directly begin with the hands-on course on Wednesday, please install the Xilinx ISE development environment on your Laptops.

- This is only necessary once for each team of two students.
- The software "ISE Design Suite" can be downloaded from the xilinx website for free. From www.xilinx.com navigate through "Downloads" to "ISE Design Tools" and choose a program Version. 13.4 is sufficient, and the installation files are smaller.
- To download, you need to register (free), and if prompted select the "Webpack" licensing model.
- Note that there is no installation file for MAC operating system, and linux functionality might be limited.

In case of questions or problems, mail to andre.zibell@cern.ch or lupberger@physik.uni-bonn.de

See you at CERN!
