Data Sharing & Data Management Fundamental Issue

Birth of Web @ CERN

The World Wide Web project

WORLD WIDE WEB

The WorldWideWeb (W3) is a wide-area hypermedia[1] information retrieval initiative aiming to give universal access to a large universe of documents.

Everything there is online about W3 is linked directly or indirectly to this document, including an executive summary[2] of the project, Mailing lists[3] , Policy[4] , November's W3 news[5] , Frequently Asked Questions[6] .

What's out there? Pointers to the world's online information,
[7] subjects[8] , W3 servers[9], etc.

Help[10] on the browser you are using

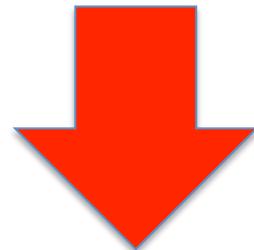

Software Products[11] A list of W3 project components and their current state. (e.g. Line Mode[12] ,X11 Viola[13] , NeXTStep[14] , Servers[15] , Tools[16] , Mail robot[17] , Library[18])

Technical[19] Details of protocols, formats, program internals etc

INFN

- Community of researcher in physics and applied physics
- Based on 4 national laboratories and 20 divisions spread across Italy

Big impact on Italian Society

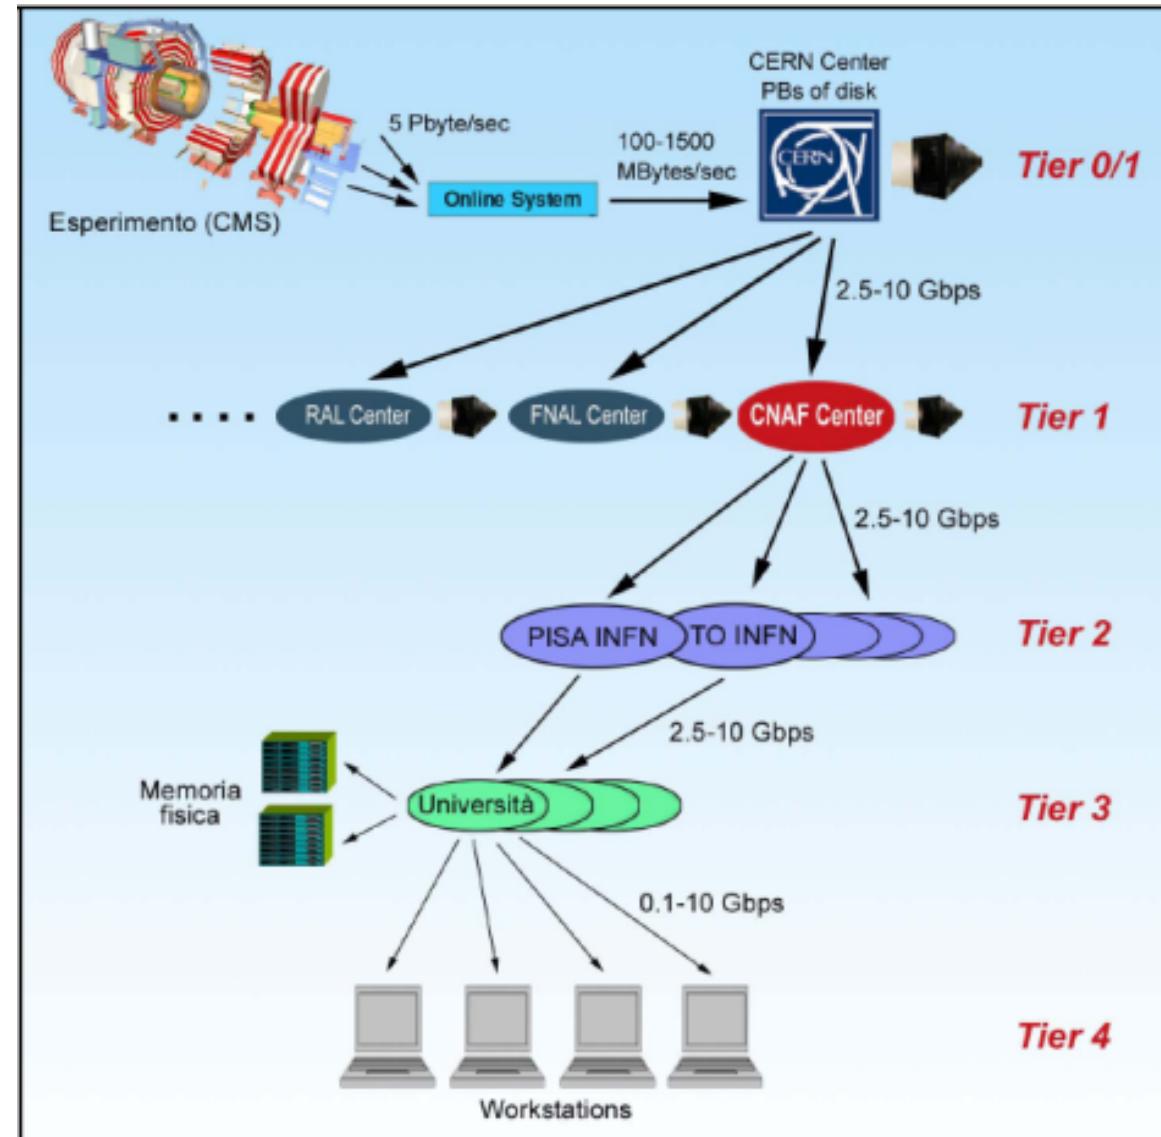

The Italian e-Infrastructure

Today Picture:

50 data centers
40,000 cores
~60 PB

Growing through
approved projects

- CPU: +25%/year
- Disk: +20%/year

The (Big) DATA

10^7 “sensors” produce 5 PByte/sec

Complexity reduced by a Data Model

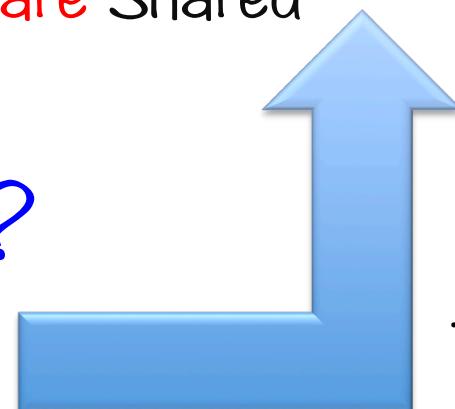

Analytics in real time filters to 0.1–1 Gbyte/sec (Trigger)

Data + Replica move with a Data Management Policy

Analytics produce “Publication Data” that are Shared

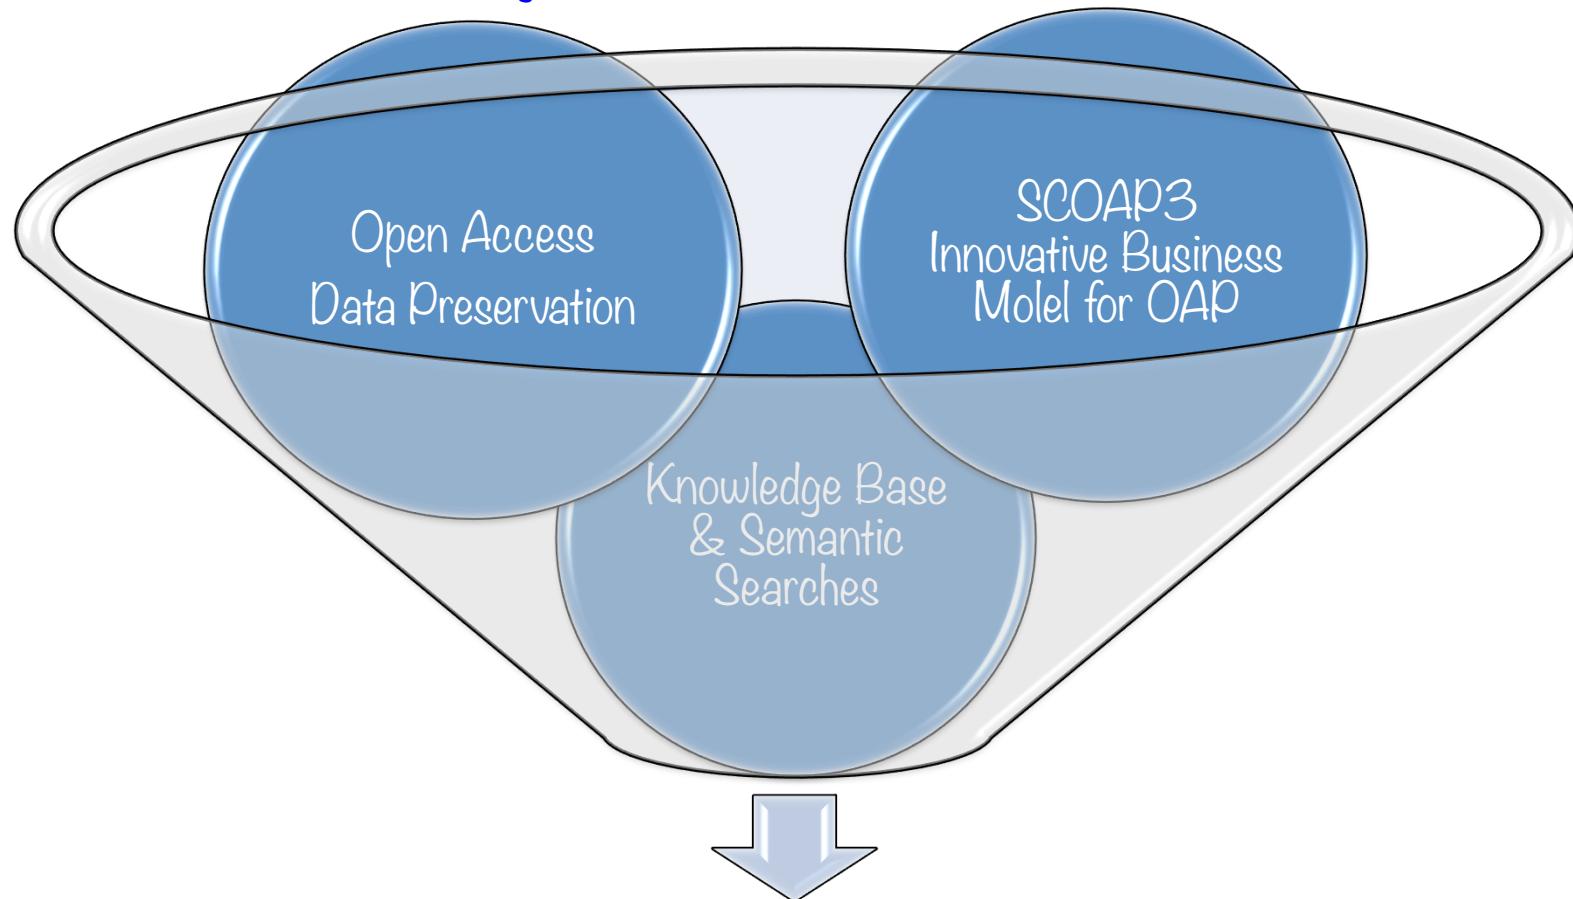

Finally the Publications

Is all that Open?

We Start

Common Practices

INFN & Open Access

Budapest Open Access Initiative 2001

Berlin Declaration on Open Access to Knowledge in
the Sciences and Humanities 2003

INFN in SCOAP3 2007

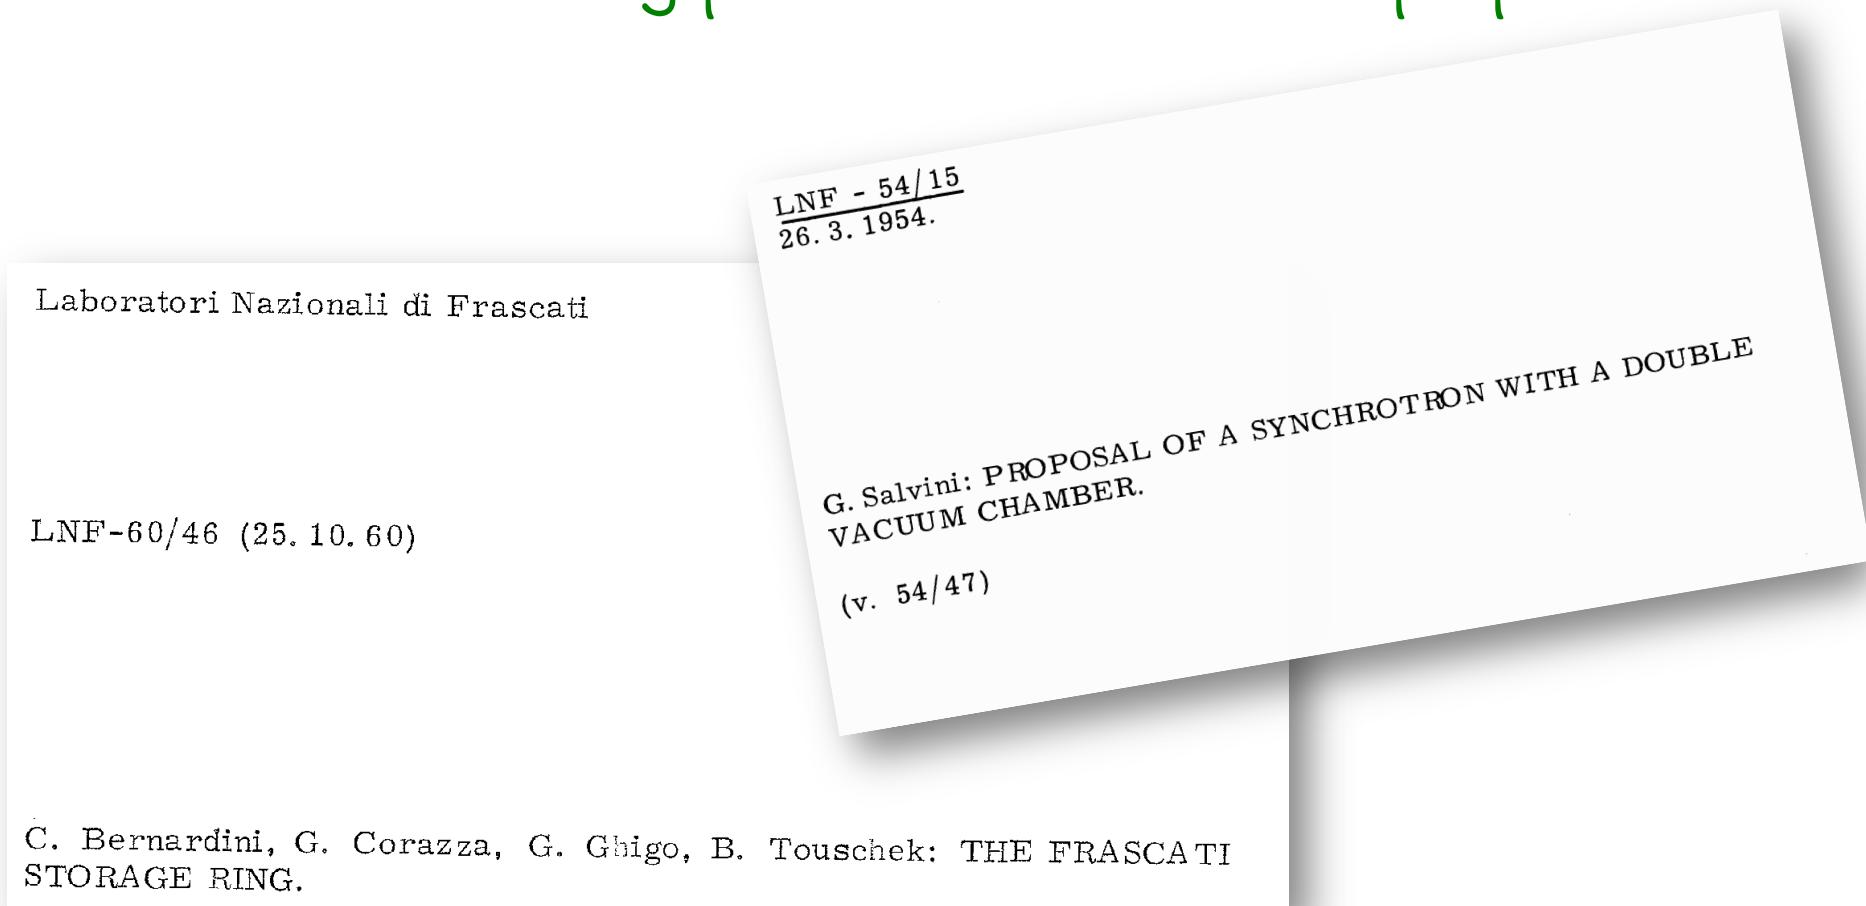

INFN signs Berlin Declaration 2008

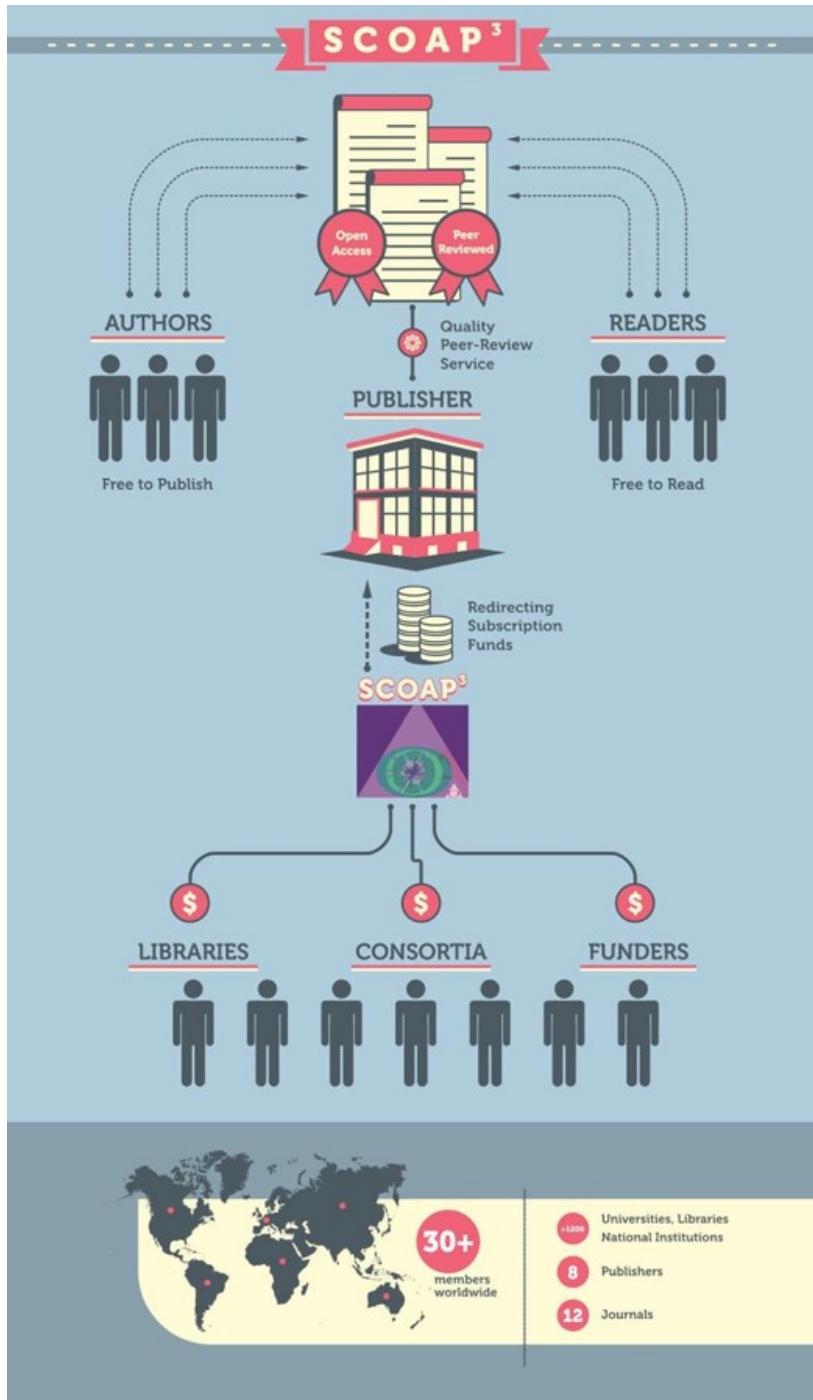

INFN signs Granada Declaration 2010

INFN signs the MedOAnet position paper 2013

Since Ever

HEP community publish and distribute preprints

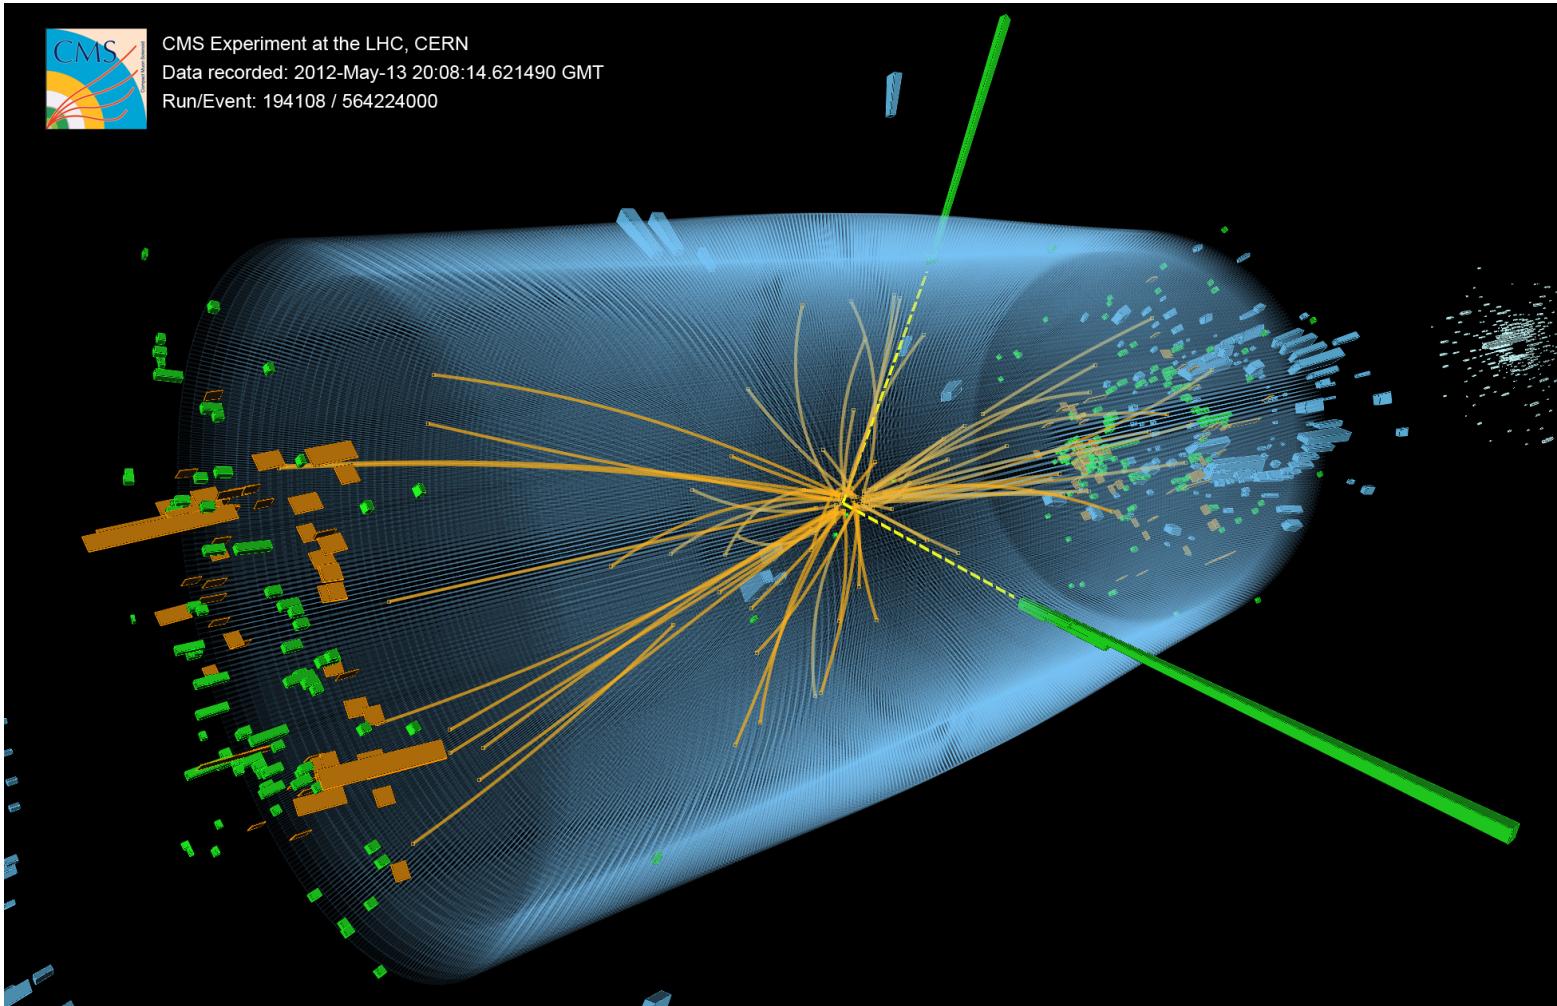

Worldwide consortium funding HEP publications and enforce OA, through the re-routing of subscription funds, and the transition to a system of commercial competition

Past: The HEP agencies subscribing through libraries funded peer-reviews, allowing its users to read the articles. There was no form of commercial competition between journals.

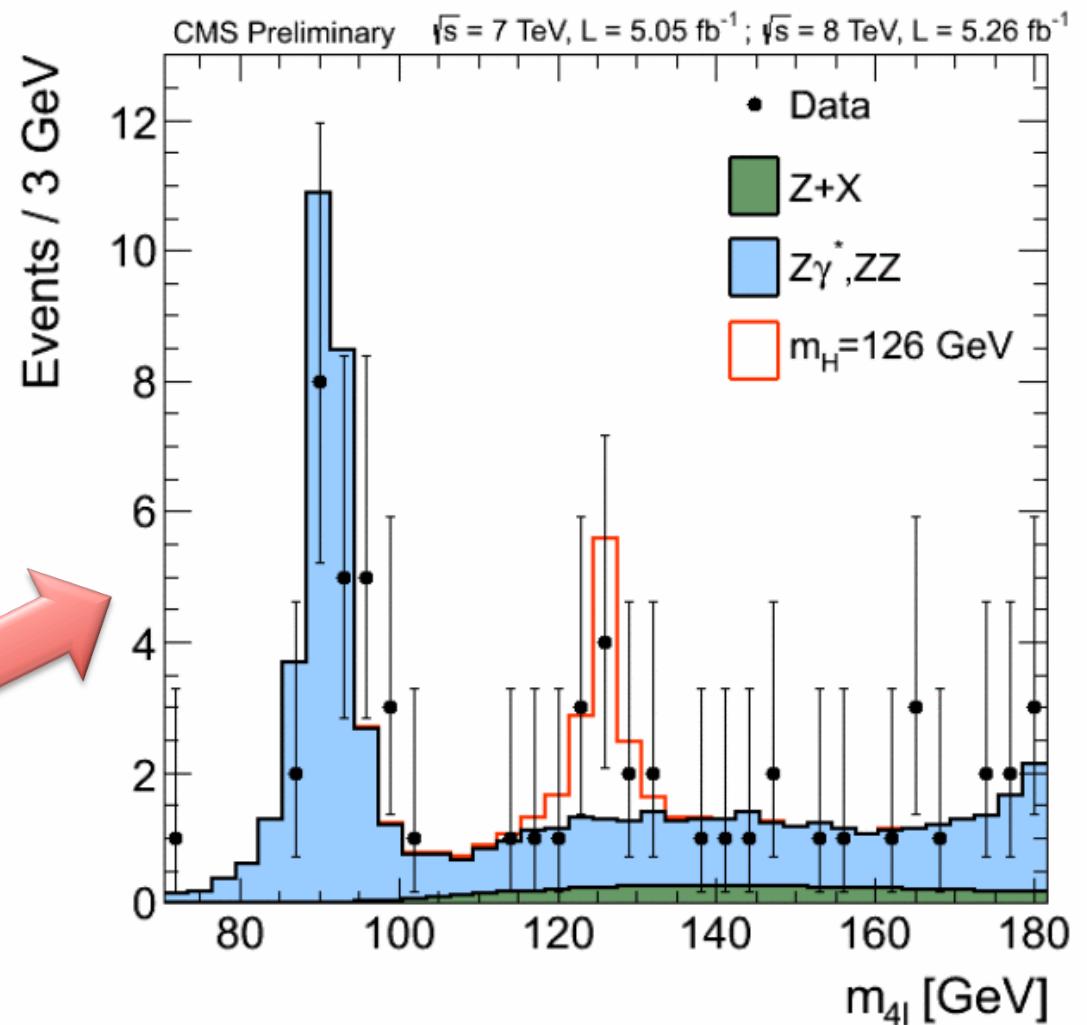

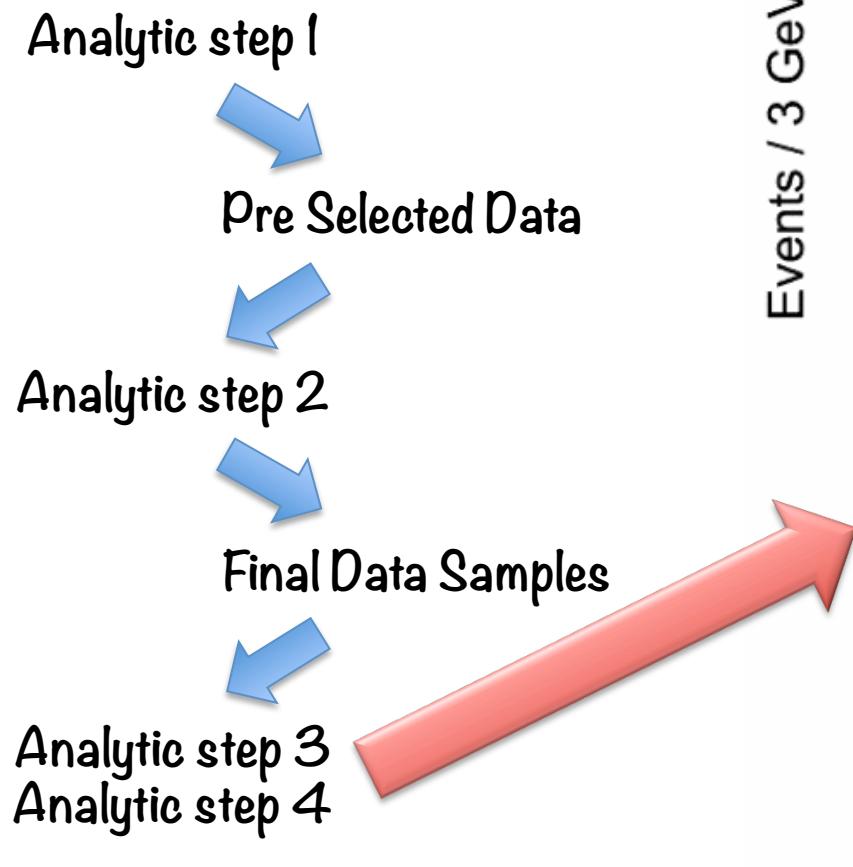

Present: The HEP agencies and libraries, together, contribute to the consortium SCOAP3 that, after selecting the journals, pay centrally the peer review for each published article. The articles are OA.

Open Data

Publication Data

The tip of the iceberg

Levels of Open Data? Discussion on going

Data Harmonization Guidelines

- Common tacit points of agreement between LHC experiments:
- ✓ ● **level 1 data:** All experiments already make data from papers and supporting information available through HEPDATA/Inspire, support open access journals etc..
- ✓ ● **level 2 data:** All experiments already support limited access of samples in simple formats for outreach and teaching.
- **level 3 data:** Full reconstruction outputs for analysis (AOD, DPD/ntuples)
! might be made available after an embargo period – but suggested durations range from 3 to 10 years, and there is a question of usefulness. The resource implications to make this useful are high.
- ✓ ● **level 4 data:** General agreement RAW data is preserved for the experiment and future – open data access is not usually possible even to the collaboration members. (In ATLAS access to RAW data on tape is restricted).
- **Tools like Rivet, HEPDATA & Recast may make data (information) usefully available, bridging level 3 and level 1.**

Data & Knowledge Infrastructure

European Research e-Infrastructures

New Trend in Europe:

Secure computing resources funding from FA:

- ELIXIR (Life science) identified nodes in the consortium
- LifeWatch (Earth science) has IT research center
- CLARIN (Arts, humanities and social science) has certified centers

Virtual hubs federating major computing centers to offer resources and services

Eu-TO

Federate major computing and data process centers of Particle, Nuclear, Astro-Particle Physics, Cosmology and Astrophysics into a integrated distributed infrastructure: a virtual European Tier0 data and computing center around which all other national centers revolve and from which all concerned national e-infrastructures radiate

IN2P3-Fr INFN-It STFC-UK DESY-DE
KIT-DE IFAE-ES CIEMAT-ES CERN
signed the position paper

NelC (Nordic e-Infrastructure Collaboration) asked to join

INFN is exporting/importing experience

Multidisciplinary and/or extra Europe

- Chain-Reds (Coordination and harmonisation of e-infrastructure for research and data sharing)
- agINFRA (data infrastructure for agriculture)
- DCH-RP (Digital Cultural Heritage Roadmap for Preservation)
- BioVel (Biodiversity Virtual E-Laboratory)

National collaborations on

- Computational Chemistry: Uni. Pg, Uni. To, CNR-ISOF
- Environmental Science: EMSO (European Multidisciplinary Seafloor Observatory) (ESFRI), DRHIM (Distributed Research Infrastructure for Hydro-Meteorology) (FP7 proj.) CIMA (Centro Monitoraggio Ambiente)
- Bioinformatics: CNR-ITB, Uni. Bo

Partecipazione JRU

- Elixir (European life science infrastructure for Biological Information)
- Life Watch : earth science in progress

From Global to Local Projects

- “Core Business” Projects

Conclusions

- INFN e-infrastructure spreads in the entire territory
- Part of an International Collaborative e-Infrastructure
- Open Access & Data “naturally”
- Rich exchange with other disciplines (federation and/or interoperability)
- Capable to study, develop & deploy solutions to demands from Global (Macro) to Local (Micro)
