EGEE Grid Operations –a reliable grid production infrastructure and a mature operations model

Thursday, 25 September 2008 09:00 (45 minutes)

The EGEE grid infrastructure has grown over the last years in terms of size, scale, usage, and reliability to become the largest multi-disciplinary research Grid infrastructure in the world.

This success has been achieved through mature operational processes, tools and documentation, and the world-wide collaboration between ROCs and sites

This talk will summarise the progress that has been made in building this production infrastructure, and discuss the major challenges still to be faced both in the near future and in the longer term.

Presenter: Mrs BARROSO LOPEZ, Maite (CERN)

Session Classification: Technical Plenary
