

“conCERNed for Humanity” invites you to a discussion about

Monday 7th July

17:00 - 19:00

CERN Room 60-6-015 (Room Charpak)

Japan- After the big wave

**with Mr Piergiorgio Pescali
(freelance journalist)**

On 11 March 2011, Japan was hit by a triple series of events that still force the Asian nation to confront his past in order to reconstruct a more peaceful future. First an earthquake, then a tsunami and finally the nuclear disaster in Fukushima.

Dozens of associations, pro and against nuclear, from 2011 continue to churn out data and theories (often unsupported by basic scientific laws) to prove their own separate theses. Thousands of farmers and fishermen are struggling against those catastrophic and superficial claims.

The presentation will bring to the attention of the public the situation of the nuclear power plant and the population visiting the entire coastline devastated by the tsunami.

It will also show aspects of life and culture of Tohoku, the northern region affected by the disaster, one of the poorest in Japan.
