

Pulsars and Indirect Signals for Dark Matter

Tuesday, 28 July 2009 15:00 (20 minutes)

Recently there have been many anomalies in the cosmic ray data in the energy range 10 GeV to 1 TeV. In addition, there is the WMAP “Haze” excess in the 22 GHz to 93 GHz frequency range. We propose that pulsars could describe all of these excesses and discuss the relevant astrophysics.
