

Data Management for Grid Environment

Marek Ciglan
Institute of Informatics, Slovac Academy of Sciences

www.eu-egee.org

Data management tasks

- Safe and reliable file transfer between grid nodes
 - GridFTP
- Mechanism for locating data sources in the grid
 - Replica Location Service
- Mechanism for data content identification
 - Metadata services

GridFTP – safe and reliable file transfer protocol

Based on FTP protocol

FTP

- Widely used
- Well-understood standard protocol
- Well-defined architecture for protocol extensions
- Transfers between client and server support
- Third party transfers between two servers support

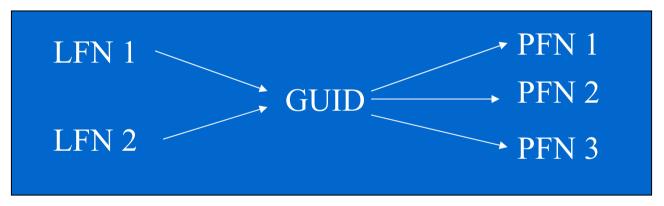

GridFTP - extension of FTP

- Grid Security Infrastructure (GSI) support
- Third-party control of data transfer
- Parallel data transfer
- Partial file transfer
- Striped data transport
- Support for reliable data transfer

- Provide information about replica location
- Replica Naming
 - LFN Logical File Name
 - GUID Grid Unique Identifier
 - PFN Physical file name

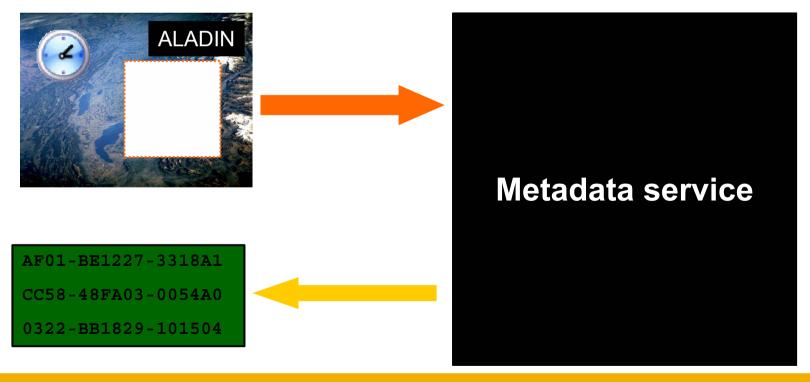

- Stores information about files stored at the grid node
- Provides mapping between LFN and PFN

- descriptive information about data
- lot of metadata types
 - general metadata (file type, file size, creation date)
 - security metadata
 - application specific metadata

Thank you for your attention.
