

# VOBOXen: LCG/OSG ops summary

*Jeff Templon*

*NIKHEF*

Culham Ops Workshop

29 sept 2005

# The Questions

1. Do we agree to deploy VO boxes (at least on short term)?
  1. Note that not all sites may do it (esp smaller sites)
  2. Who will pay?? Do exp'ts care if they have less resources?
2. Can we agree on requiring VO box services to conform to the JSPG recommendations?
  1. Change the name
  2. Need proper balance on asking for information about service

# The Questions

1. Which services do we want to declare as 'holy'?
  - ☺ workload -> standard (single) gatekeeper
  - ☺ Storage -> standard SRM
  - ☺ What else? [ monitoring & *n.b. we need a "single" one like gatekeeper!* ]
2. Do we have a preference for the future?
  - ☺ Current-style 'login' boxes
  - ☺ Container technology (e.g. tomcat or similar critters)
  - ☺ Virtual machines
  - ☺ No VO boxes whatsoever?

# The Questions

- ✧ Seems to be a shift towards significant “VO middleware” component
  - 😊 Do we have a strong opinion?
  - 😊 Do we have a choice?
  - 😊 Do we need to take action?
