LHCb + Dirac status

- Dirac status
  - Bug found in networking by Belle admins
    - Service did not find networking when there was no ipv6 in the kernel
    - Problem seen in services at KEK
  - Fixed in DIRAC stack by Simon Fayer

- LHCb status
  - Dual stack servers in production now
    - Limited number of services running on them
      - In particular **not** the DIRAC configuration service
    - Wait for some time to check stability before expanding the list of services on these machines
  - These new servers are part of LHCb re-organisation of the DIRAC services and are planned to all be dual-stack
