# Proposed plan for T3 integration (in US)

<u>3 steps/phases:</u>

1 - bring all (small) T3 sites to the minimal level to do physics [T3w]
      (dq2 client - no subscriptions)

2 - incorporate subscriptions for those T3 sites that want        [T3g]
      (& can support) them - many options under investigation

3 - incorporate access to conditions db for those T3 sites that want
      (and can support) it                                                                 [T3g]

   Not clear which of "2" or "3" will be solved first

# Plan for step 1

Prepare "T3 HOWTO" following ANL T3 model:

Doug will prepare HOWTO (based on application of ANL model to Duke T3)

Create a validation procedure

Form T3 technical task force to aid in support (coordinated by Doug)
- should include expertise from ANL

Pass HOWTO on to T3 community (Twiki on dosar.org)

To insulate T1/T2 system support, T3s encouraged to help each other
(USATLAS hypernews: "Tier3 support", Twiki, biweekly meetings)
Doug and jc will represent T3 community to T1/T2 management
