

Higgs self coupling measurements in the fusion channel

Saturday, 11 March 2006 09:40 (20 minutes)

We investigate the double Higgs production process at the ILC, focusing on the measurement of the trilinear self coupling of the Higgs boson in the fusion channel. The sensitivity of this measurement is discussed in the Higgs mass range 140-200 GeV at a center of mass energy between 1 TeV to 1.5 TeV.
