Data Management

- Storage situation right now overall looks fine.

- Table with space allocation and usage on pg.2 (total pledged and LOCALGROUPDISK separate).

- Contacting LOCALGROUPDISKs users who haven't answered to automatic notifications, as well as top users (regardless of their storage requests), to find and cleanup some extra stuff where storage is getting tight.

- Continuing to look into data with root and ddmadmin ownership, trying to find the real owners. Already some cleanup done.
