

New Lifecycle User Test Feedback and Future Deployment Perspective

Marc Timmins (CERN EN-MME) - Stephane Bally (CERN EP-CMX)

25ème Forum Utilisateurs CATIA au CERN

Introduction

Pilot projects - Users feedback

Deployment perspective

Introduction

WHY ?

Historically

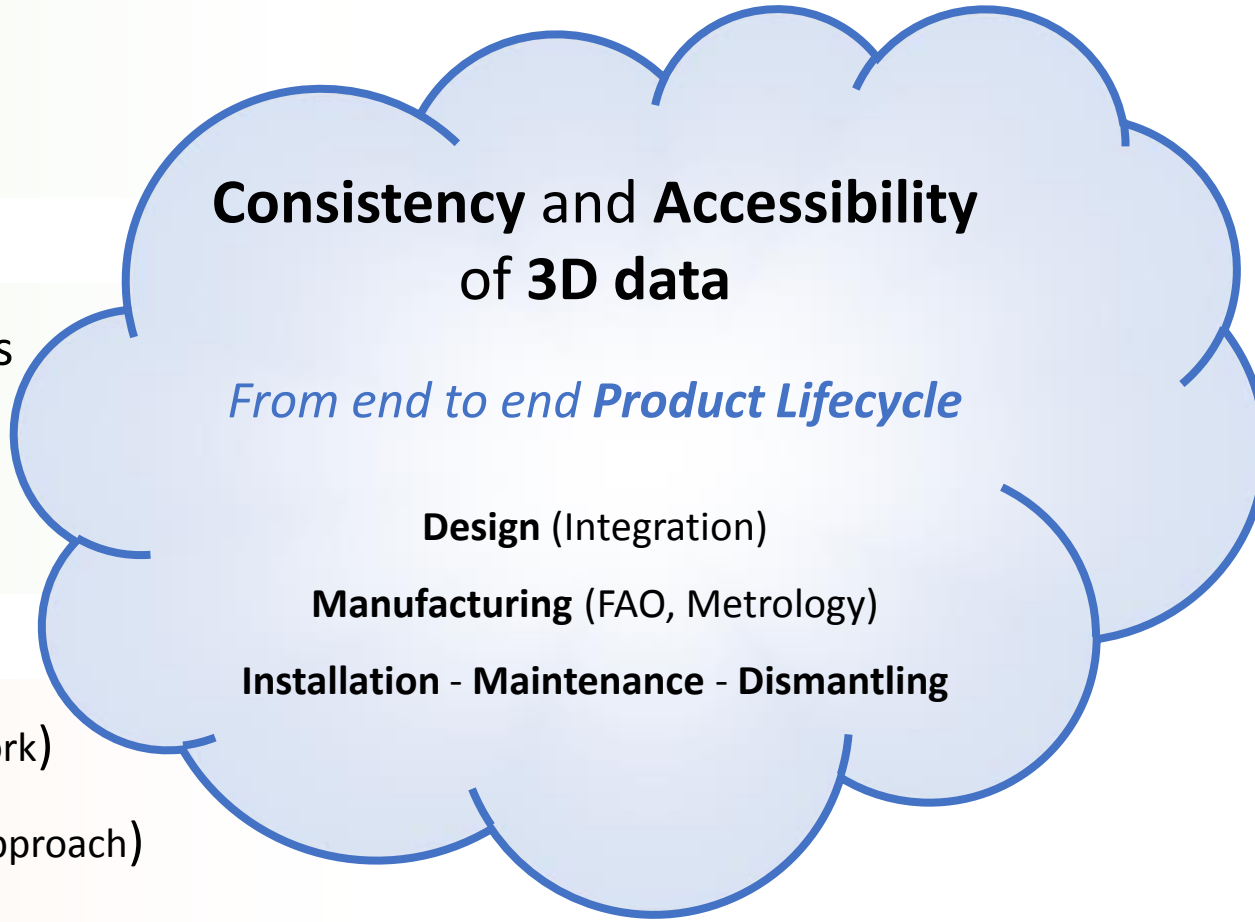

Needs for improving SmT data management
Workshop/Audit at CERN with consultants
Specification to secure CAD data (2D/3D)

Developments on SmT & CDD/EDMS systems
Validation tests by PLM WG
Pre-deployment on pilot projects

Coming months

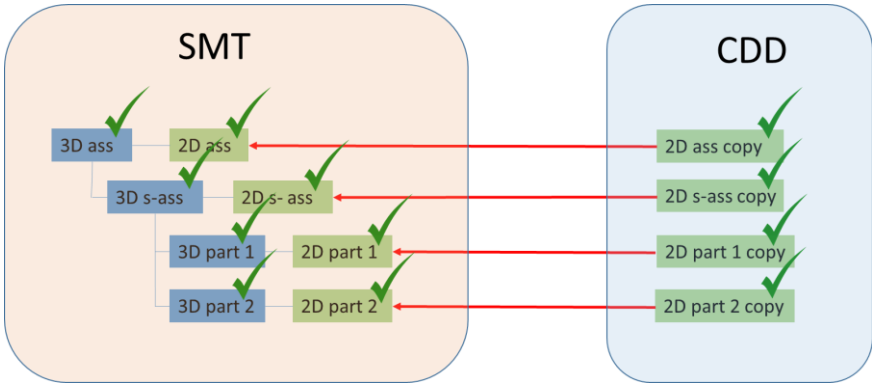

Extend pilot projects (complexity, collaborative work)
Consolidate standards catalogue (bottom-up approach)
Deployment CERN wide

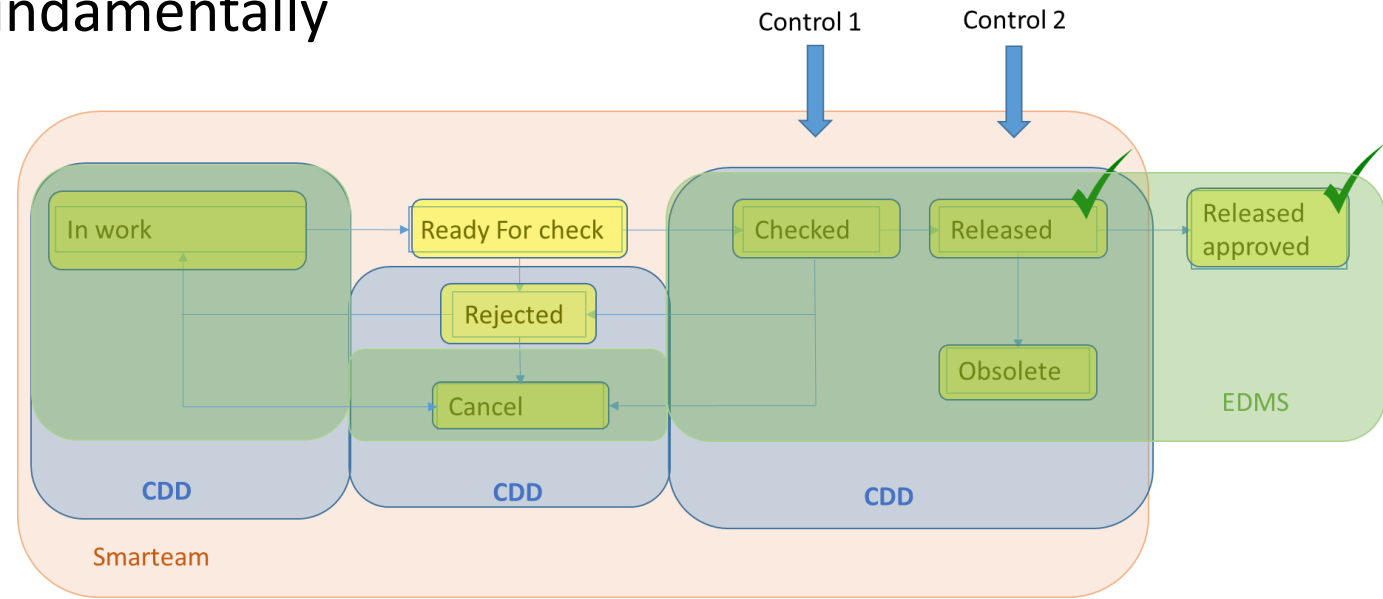

Introduction

HOW ?

Synchronise our 2D/3D statuses in **CDD/EDMS** and **SmarterTeam**

without changing
fundamentally

our existing **release CDD/EDMS workflow** (C1, C2, Approval, Cancel)

Introduction

Pilot projects - Users feedback

Deployment perspective

Outline

1. Pilot project users
2. Test scope
3. Feedback

CAD LIFE CYCLE / CYCLE DE VIE CAO

<p>READY FOR CHECK</p> <p>ABSTRACT:</p> <p><i>This state means that, according to the person responsible for the document, the document is complete, respects the rules and methodologies, corresponds to the requirements, is consistent with the documents it depends on and is thus ready for validation.</i></p> <p><i>This is a prerequisite for a drawing to get its first signature in CDD.</i></p> <p><i>Best practice: a good approach is to perform the transition from bottom to top. In other words, it is easier to transition the parts first, and then to proceed with the transition of the products which contain these parts, rather than doing the products and the parts all at once.</i></p>	<p>PRET POUR LE CONTROLE</p> <p>SUJET:</p> <p><i>Ce statut signifie que, du point de vue du responsable du document, celui-ci est terminé, en accord avec les règles et qu'il correspond aux exigences, qu'il est cohérent avec les documents dont il dépend et que donc, il est prêt pour être validé.</i></p> <p><i>Pour un dessin, il s'agit aussi d'un prérequis pour obtenir sa première signature dans CDD.</i></p> <p><i>Conseil : une bonne approche est de réaliser cette opération de cycle de vie du "bas" vers le "haut". Dit autrement, il est plus facile de commencer avec les Parts, puis de continuer avec les Products qui contiennent ces Parts, plutôt que de vouloir tout faire en une seule fois.</i></p>

LIFE CYCLE / CYCLE DE VIE

CHECK CHECK

ABSTRACT:
After having validated the quality of the documentation, verified that the standards are respected and that the 2D and 3D are consistent with each other, it is possible to change the state of the document (2D) to "Checked".

SUJET:
Après avoir validé la qualité de la documentation, vérifié que les standards sont respectés et que le 2D et le 3D sont cohérents l'un avec l'autre, il est possible de faire passer l'état du document (2D) à "Checked".

"Checked" transition documentation

LIFE CYCLE / CYCLE DE VIE

RELEASE RELEASE

ABSTRACT:
Design validated as a whole. This operation involves validating the object's feasibility and the fulfillment of the technical requirements.

SUJET:
Après avoir validé la conception d'un point de vue de la faisabilité technique, il est possible de faire passer le document (2D) à l'état "Released".

3. General Feedback

- **The functionalities comply with the spec. The support & development teams (CAD & EDMS) did a good job !!**
- **No big instabilities. Few bugs (not many) identified and solved.**
- **Issue messages in report are OK. Room for improvement (planned).**
- **Demands a more rigorous way of working (methodologies).**
- **Time consuming (not negligible depending on data state).** Not the case for c1 and c2 users.
- **2D not up to date with 3D doesn't prevent validation.**

Releasing a 3D guaranties a date coherence with the 2D but not the compliance. Q checker could be a future option for verifying coherences!

3. Feedback in more detail

We are forced to adopt new working methods.

- **Time consuming (not negligible depending on data state).**
 - Healing is long (CO, CI to get dates back into coherence especially on large assemblies) *short term cost*
 - Catch-up data. New index on drawing for release in SMT. *Scenario example on next slide. Long term cost*
 - What do you do with data that doesn't belong to you ? *Medium term.*
 - Pay attention to ITEMS which have more than 1 document. (multi-sheet, mounting sequence, etc...) *short term cost*
 - Contextual links can be an issue (skeleton methodology is a solution). *Long term cost*
 - Release on 3D & 2Ds for catalogue components are now mandatory (Raphael Leuxe will need help !). *short term cost*
 - CDD is slower (Checking dependencies between systems). *Long term cost*

Scenario

Modification of a part made in an existing assembly using the new the lifecycle

Working on solutions to ease releasing documents in Smarteam when they are already released in CDD without incrementing the index.

One shot, then no longer needed

CO and CI with new Index in order to Release assembly And checking compliance of data

New chamfer on part. (becomes Release A)

OK

4. Impact on standard parts CAD catalogue

600 models need to be checked and released

2400 element already released in the database

- Cost: 800hrs of work (pending response from management)
- 3 or 4 additional catalogue managers to speed up release procedure for all new requests.

Released for
catalogue

Catalogue parts tagged as “Released for catalogue” are reliable.

5. Conclusions

- The pilot users all agree on the benefit of the new lifecycle in terms of securing their CATIA data.
- They point out the fact that it will be time consuming especially at the start (clients need to be aware of this).
- Controls are usually done at the last minute just before production !!! Advise is to anticipate and plan the release process to avoid stress.

Thank you for your
attention

Introduction

Pilot projects - Users feedback

Deployment perspective

Deployment perspective

2017

Feb – May

Extended Pilot Projects

- Make bigger user *community*
- Validate *methodology* (complex product, collaborative work)
- ★ Training on new LC & specific CAD **Support** obtainable

Milestones

May

Switch to green light unless

- **Management Decision**
- Extended pilot project **Feedback**
- **Catalogue** release completion
- **Catch-up** methods/tools
- **Training** organization

Deployment on New Projects/Jobs

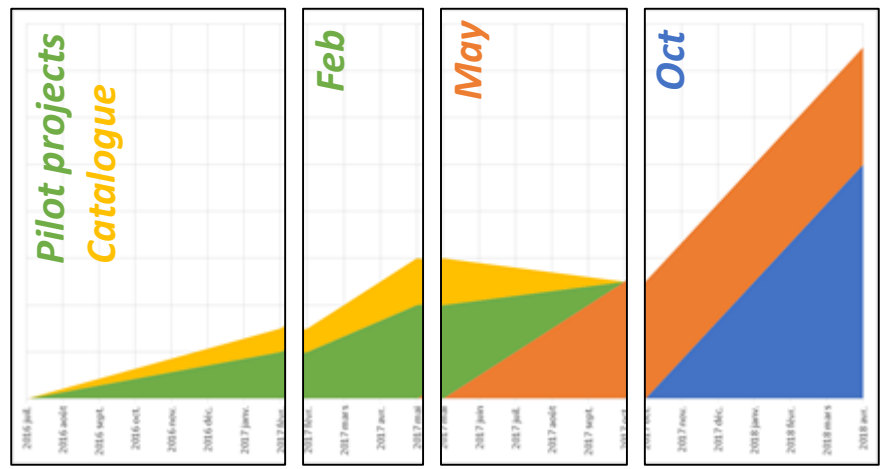

- Variable **Cost**: Legacy catch-up / Design methodology / Collaborative work

Oct

Global Deployment

- Whole user *community*

Increasing

Conclusions

- Consolidating of **catalogue**
- Tools/Methods are under study to ease **catch-up** effort
- **Anticipate** and contact/propose your **project** as **pilot** to CAD Support
Training and Analysis of data & methodology are recommended
- **Management** agreement to switch new projects in **May**
- Global Deployment foreseen in **2017**
