

# SPMS Regional Support Center Activities in North America

Matt Arena, Fermilab

# History & Statistics

- ▣ 55 conferences have/are/will use SPMS. See [http://oraweb.cern.ch/pls/jacow/Conf\\_List.html](http://oraweb.cern.ch/pls/jacow/Conf_List.html) for a complete list.

# SPMS @ Fermilab

- ▣ Fermilab continues its support of SPMS.
- ▣ Host conferences in NA, however conferences must host the file server for author uploads.
- ▣ Recently upgraded the database to 10g on a bigger box with more memory.
- ▣ A recent reorganization means I'll soon have a backup developer (or two).
- ▣ Fermilab supports an instance of InDiCo.

# Conference @ Fermilab

- ▣ Currently running @ FNAL
- ▣ BIW10, ICAP09, PAC09, BIW08, ECRIS08, LINAC08

# Other Activities

- ▣ Not technically an RSC activity
  - SPMS development – new requests and bug fixes
  - Patching – I have direct access to SPMS instances at CERN, KEK & FNAL.
  - Maintaining the SPMS download page
    - ▣ Bug/enhancement list
    - ▣ Bundling patches and full source-code zip files
  - Answering questions – lots and lots of them.

# Thoughts & Observations

- ▣ The Team should suggest guidelines on when to suspend the SYNC process and when to shutdown an instance
- ▣ Still no guidelines/consistencies in repatriation
- ▣ Documentation progressing well and much needed
- ▣ RSCs are working well together
  - Patches are no longer needed as I have direct access
  - Significantly less issues with “satellite” sites
  - Recommendation: Officially support SPMS only at RSC
