

ICAP'09 (reported by Joe Chew, LBNL)

- 2009 International Computational Accelerator Physics conference
 - Sponsored by Lawrence Berkeley National Laboratory and SLAC National Accelerator Laboratory
 - Mark Hopkins Hotel, San Francisco, CA, USA, 30 August-4 Sept. 2009
- Small conference with simple structure
 - Plenaries, two parallel oral sessions, one poster session
 - Paperless and disk free—JACoW will be only form of publication
 - Did not use SPMS committee or registration features
- Expect perhaps 70 papers (40 invited oral, 30 posters)
 - Per the chair, over my objections, due date was end of conference
 - A few still straggling in, of course (will suggest end of Nov. cutoff)
 - Publication not required for speaking; we will be silent on missing ms
 - 60% Windows, 20% Mac, 20% Linux/Unix, most early green dot
- Being a “one-man band” editor busy enough, and + IT + logistics guy not recommended -- but sometimes necessary for small impecunious conferences
