

# Transition to EGI

## O-E-11: Coordination of interoperations between NGIs and other grids

*Erwin Laure, Gert Svensson (KTH, PDC)*

- **Goals: Maintain and extend interoperation within Europe and abroad**
- **Key external infrastructures: OSG, DEISA/PRACE, TeraGrid**
- **Within EGI: allow NGIs to deploy services from ARC, Condore, gLite, globus, and UNICORE**
- **Strong interaction with projects supporting middleware will be essential**
- **Means: this has to be done in international context with everybody as peers - hence OGF is the right place.**

- **SNIC (Swedish JRU) is awaiting EGI Inspire before formally assigning task to a site.**
