

From CE-ROC to NGI-ROCs

Tomasz Szepieniec, Tadeusz Szymocha, Marcin Radecki

ACK Cyfronet AGH

- **All NGI in CE ROC declared to have full set of ROC/NGI services**
- **Closing of CE ROC after EGEE3:**
 - **There is no transition task in EGI-InSPIRE**
- **Ready to switch: Poland, Croatia (?), ...**
- **Others in EGI era (?)**

- **Documentation “How to create a ROC” is documentation of CERN-ROC – mainly requirement and actions for a candidate ROC**
 - **→ HOWTO for a parent-ROC and tools operation is missing**
- 1. Exact procedure for requesting new ROC**
 - **who create a ticket? How it should be operated**
 - 2. Procedure of certification of a new ROC,**
 - **is a parent-ROC responsible body?**
 - **do we require any confirmation from any central coordinators? (e.g. security, integration with GGUS)**

- 1. GGUS:** changes can be done only around GGUS release - once per month. (from ROC_IGALC case)

- 2. GOCDB:** 1) new ROC creation, 2) switch countries (sites) to new ROC – on demand?

- 3. Requirement: "A record of 4 attendances to the weekly OPS meeting"**
 - 2 seems enough
 - What about « SA1 coordination meetings »?

- **Requirement: it should be possible for a single person to have roles assigned in two ROCs (parent and NGI-ROC)**
- **ROD is not indicated as mandatory in “CERNNewRocTemplate”**
- **Clarification of that VO is required for testing ops, dteam?**
 - “regional Nagios” testing in ops VO require at least one cert from each region
- **A requirement for having a robust Top Level BDII (more that one instance in the pool)**

- **VO Scope:**
 - A case-study: regional catch-all VOCE – agreed to be supported in all the countries in CE after EGEE;
 - After creation of ROC-Poland formally VOCE should be classified as global (but is regional!)
- **SLAs:**
 - Should SLAs be signed again with new ROCs?
 - Missing SLA/SLD between the Infrastructure (EGEE/EGI) and ROC (NGI-ROC)
- **Weekly operation meeting:**
 - 1 CE ROC representative → 8 NGI-ROC representatives

- **Proposal: CERN ROC to specify how technically the process was operated**
