

Another way to improve the resolution

- The aspect ratio of pitch/thickness of 55/150 is not totally ideal
- This could be improved with the use of floating pixels
- The principle has already been demonstrated for p-on-n assemblies and simulations developed (e.g. IEEE vol 50., no. 1 Jan 2003)
- Could this be achieved with n-in-p technology?
- Plan to look at possibility of preparing a mask to go with next run from Liverpool mask set (G.C.)
