

# Broadcast from the control rooms

- Video camera broadcasting from control rooms (1)
  - Technically possible
  - System partly put in place for LHC First Physics Media Event ( 7 TeV collisions)
  - They have installed encoding PCs in the experiment control rooms
  - 3 cameras are available to be installed for the 8th March (fixed)
  - Do we want microphones ?
  - We could show them all in one web page (no sound) or seperately
  - We could broadcast “live” the interviews by Paola (see presentation by Paola) announcing e.g. 10:00 interviews from CMS CR, 11:00 interviews from ALICE etc ..
  - Needs preparation (mental and technical) ; Do we want it ? Can we do it?
- Webcams updating static photographs (2)
  - Static camera - show CR full of women (in the best case) - is it interesting ?
  - We could show them all in one web page / click to enlarge
- CERN Public Screens (3)
  - (Main building next to Auditorium. IT? Visits service in 33? Experiments Public Screens?)
  - Show some text about the event and loop over the snapshots from the webcams from each experiment control room

From discussion with THOMAS BARON (IT UDS) who kindly offered to help

QuickTime™ and a  
decompressor  
are needed to see this picture.

decompressor  
are needed to see this picture.

webcams

QuickTime™ and a  
decompressor  
are needed to see this picture.

Will have 3 more

## We need to decide now

- Do we want any / some / all / none of the above
- Number of questions :  
What do we want to show?  
To whom?  
For how long ?  
Is it interesting ? Static camera - show CR full of women (in the best case) -
- The experiments have to say
- Authorisation to show the webcams?
- Ask individuals if they want to be looked at?
- If we go for it - contact persons for help with links, installation etc
