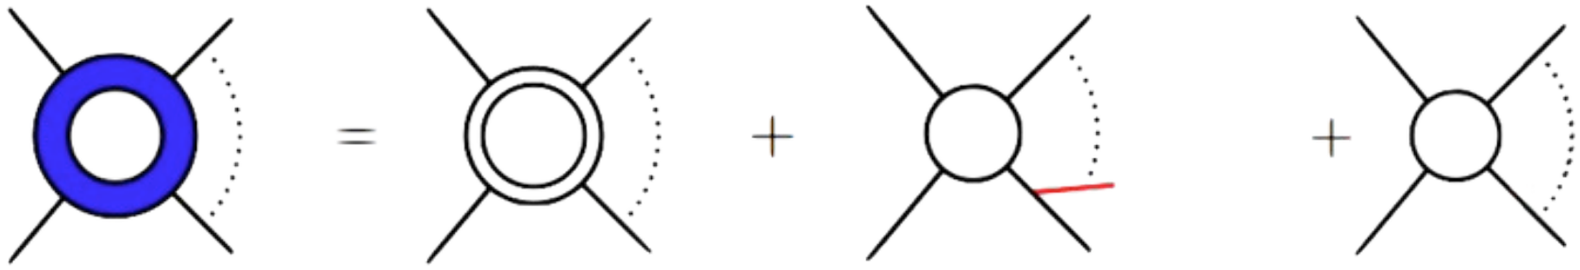
Future of MADGRAPH 5

Plan in MG5

- NLO Computations

NLO Virtual Real Born



$$\sigma^{\mathrm{NLO}} = \int_m d^{(d)}\sigma^V + \int_{m+1} d^{(d)}\sigma^R + \int_m d^{(4)}\sigma^B$$

MG5 = CutTools + MadFKS + MadGraph

CutTools: [V. Hirschi, R. Pittau, M. V. Garzielli, R. Frederix]

MadFKS: [R. Frederix, S. Frixione et al.]

Plan in MG5

- NLO Computations
- Recursive Relations
  - For multijet generation (≳ 4 jets), Feynman diagram formalism expensive (factorial growth)
  - Recursion relations (such as Berhrends-Giele) can reduce run time by orders of magnitude

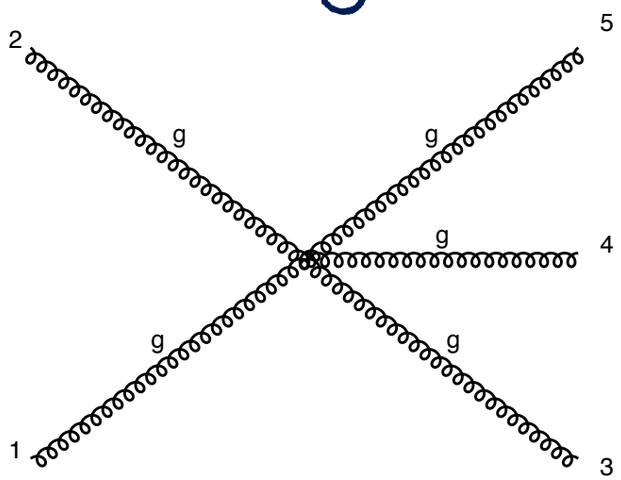


diagram 1

Conclusion

- MG/ME V4 is a mature, well established and stable code with many features for BSM and QCD physics and numerous peripheral tools
- MG5 is available with important and unprecedented improvements in all directions.
- Still many new features to come in the near future
