

NA- WP8 Communication and dissemination

From the Grant Agreement

Objectives

- Promote hadrontherapy facilities throughout Europe
- Increase awareness to general public and medical communities about new possibilities offered to cancer patients using hadrontherapy for treatment
- Catalyse collaboration among different scientific communities
- Develop training courses for researchers wishing to use facilities and for technical people working at facilities
- Promote and communicate outcome of research activities among related JRA and ULICE partners and beyond
- Involve the ENLIGHT community in annual workshops

NA- WP8 Communication and dissemination

Who is involved

CERN

CNAO

ESTRO

IFJ PAN

Deliverables Year 1 (tools needed to help achieve the objectives)

- Internal Website
- Public website
- Electronic e-mail lists

All ULICE members should have access

ULICE Announcements

New Procedure for submitting deliverable reports.

by Audrey Ballantine

The ULICE coordinator announces that there is a new procedure to be followed for submitting deliverable reports. This procedure can be found here on the website under "Useful documents and templates"

03/05/2010 12:14 PM

ULICE technical Board Meeting

by Audrey Ballantine

The 1st Technical Board meeting will take place on 19th March at CNAO, Pavia, Italy.

WP6 Carbon Ion Gantry Survey Available on line

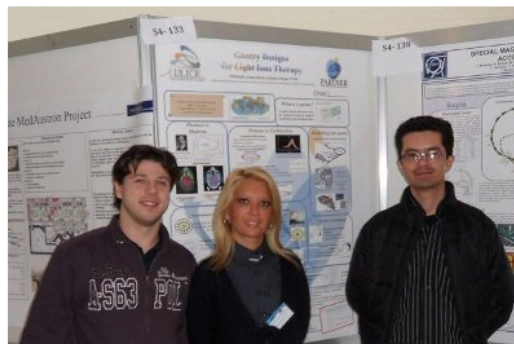

by Audrey Ballantine

The WP6 Carbon Ion Gantry Survey is now available on line (Go to Survey)

ULICE researchers present their posters at the "Physics for Health in Europe" Workshop, Geneva, Switzerland 2-4 February 2010.

by Audrey Ballantine

05/03/2010 03:04 PM

All WPs have their own workspace.
WP leaders have control over the workspace

Time to start populating the
website with project news !

ULICE is a 4-year project set up by 20 leading European research organisations, including 2 leading European industrial partners (Siemens and IBA), to respond to the need for greater access to hadron-therapy facilities for particle therapy research. Project coordinator is the Italian Research Infrastructure Facility CNAO (Milan).

Both existing European Hadron Research Facilities in Heidelberg and Milan are partners and they will provide 691 hours of beam-time (146 users, 58 projects) to external researchers. Future facilities like MedAustron, Etoile and Archade also participate in ULICE, which will result in a strong integrated network.

Full exploitation of all different resources, unrestricted spread of information and the improvement of existing and upcoming facilities are provided by using grid-based data sharing.

The project is built around 3 pillars with measurable outputs. These outputs will be exploited by the (future) facilities and (partly by) the industrial partners:

The ULICE project is funded by the European Commission under Grant Agreement No 228436

We have the tools ... What we need to do next ? Year 2

Deliverable	when
Annual Workshop proceedings and presentations publication in written and online forum	NOW !
Identification of education and training programmes in relation to RI	October 2010
Establishment of the Publication Review Committee	April 2011
Creation of a web-based portal for publication submission	June 2011
Annual Workshop proceedings and presentations publication in written and online forum	August 2011
