SPEAKER: Kevin Lannon (University of Notre Dame)

TITLE: **Observation of Single Top at CDF**

DATE: Tue 31/03/2009 16:30

PLACE: Main Auditorium**

ABSTRACT

On March 4th, 2009, the Tevatron achieved an important milestone with the simultaneous observation of electroweak single top production by the CDF and D0 collaborations. In this talk, I focus on the analyses that achieved observation at CDF. I also discuss the most recent CDF top mass results and give a brief update on the status of the search for the Higgs boson.
