The IBM Research Global Technology Outlook

Wednesday 29 September 2004 12:00 (30 minutes)

The Global Technology Outlook (GTO) is IBM Research's projection of the future for information technology (IT). The GTO identifies progress and trends in key indicators such as raw computing speed, bandwidth, storage, software technology, and business modeling. These new technologies have the potential to radically transform the performance and utility of tomorrow's information processing systems and devices, ultimately creating new levels of business value.
