Production Experience of the Storage Resource Broker in the BaBar Experiment

Wednesday 29 September 2004 10:00 (1 minute)

We describe the production experience gained from implementing and using exclusively the San Diego Super Computer Center developed Storage Resource Broker (SRB) to distribute the BaBar experiment's production event data stored in ROOT files from the experiment center at SLAC, California, USA to a Tier A computing center at ccinp3, Lyon France. In addition we outline how the system can be readily expanded to include more sites.

Primary authors: HASAN, A. (SLAC); NIEF, J-Y. (ccin2p3); KROEGER, W. (SLAC)

Presenter: HASAN, A. (SLAC)

Session Classification: Poster Session 2

Track Classification: Track 5 - Distributed Computing Systems and Experiences
