OpenPAW

Thursday 30 September 2004 10:00 (1 minute)

OpenPAW is for people that definitively do not want
to quit the PAW command prompt, but seek anyway
an implementation based over more modern technologies.
We shall present the OpenScientist/Lab/opaw program
that offers a PAW command prompt by using the OpenScientist
tools (then C++, Inventor for doing graphic, Rio for doing
the IO, OnX for the GUI, etc…). The OpenScientist/Lab package being
also AIDA complient, we shall show that it is possible
to marry AIDA with a PAW command prompt.
