1. Ultimate goals of the development plan : **F2D2 16 T short model**

- Requires **grading** → choice of **external splices**
- Option for internal splices open

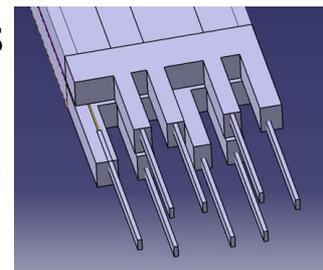

2. Demonstrate feasibility of external splices on **R2D2**:

- **a 12 T simplified magnet**
- **Racetracks** to simplify coil fabrication and assembly
- **Single layer coils** to reduce the use of conductor and risk
- Fast turn-over **mockups** + full size **Cu coil**

3. But, additional complexities due to racetracks:

- **Difficult protection** due to high current/energy densities
- **Long spacers** to extract leads + reduce field in the ends
- **Difficult access** for longitudinal pre-load

4. **R2D2 optimized for safety margins, not performance**
