

R&D Advisory Group

News 22.09.2021

News

So far, the R&D Advisory group has focused on discussions of prioritized R&D activities in the experiments and EP-SFT, while assessing their impact on CERN IT resources

For this meeting we have organized a discussion with the experiments and EP-SFT on

- main areas of R&D activities where there is the potential for collaborative work and support
- anticipated impacts on IT services and resources

To keep track of projects we will maintain a table

- activities will be grouped by category and updated in the minutes as projects progress

Category	Project name	Short project description	Lifecycle status	Presented on	Allocated resources	Groups Involved	Related projects
