## Doubly bottom Tetraquarks

*Wednesday, 28 July 2021 06:45 (15 minutes)*

We investigate doubly heavy tetraquarks with quark structure  $\bar{Q}\bar{Q}'qq'$  in full lattice QCD using the NRQCD formalism for bottom quarks. We focus mainly on bound states in systems with two heavy antiquarks  $\bar{b}\bar{b}$  and  $\bar{b}\bar{c}$  in the presence of light quarks  $q \in \{u, d, s\}$ .
