Consistency of lattice and R-ratio determinations of the HVP: Update from RBC/UKQCD

Tuesday, 27 July 2021 05:15 (15 minutes)

The Euclidean time windows defined in RBC/UKQCD 2018 provide a means to test the consistency of different lattice results as well as the consistency with the data-driven R-ratio results on a short timescale. This is of particular urgency due to an apparent emerging tension between data-driven results and some lattice results. I will present an update to the 2018 RBC/UKQCD result for Euclidean time windows for the hadronic vacuum polarization (HVP) contribution to the muon $g-2$.
