## **Operator renormalization & improvement for $N_f = 3$ QCD in a $\chi$ SF setup**

*Wednesday 28 July 2021 13:30 (15 minutes)*

We present our progress in the non-perturbative  $O(a)$  improvement and renormalisation of quark operators in three-flavour lattice QCD with Wilson-clover fermions. We employ the chirally rotated Schroedinger functional scheme in finite volumes. Our calculations cover both weak- and strong-coupling regions for the RG-running, where step scaling functions are computed.
