V_{cb} and V_{ub}

from FLAG 2019 arXiv:1902.08191

$|V_{cb}|$ *(excl)* = $(39.09 \pm 0.68)\ 10^{-3}$

$|V_{cb}|$ *(incl)* = $(42.16 \pm 0.50)\ 10^{-3}$

from Bordone et al. arXiv:2107.00604

~2.8σ discrepancy

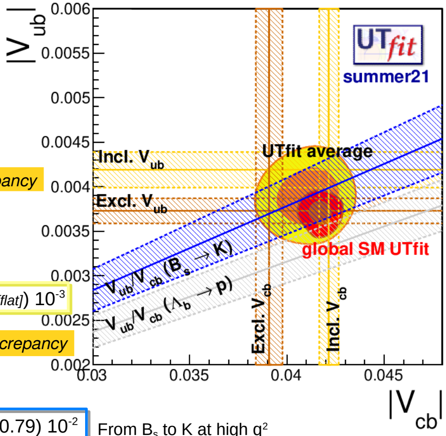
from FLAG 2019 arXiv:1902.08191

$|V_{ub}|$ *(excl)* = $(3.73 \pm 0.14)\ 10^{-3}$

$|V_{ub}|$ *(incl)* = $(4.19 \pm 0.17 \pm 0.18$ *[flat]*$)\ 10^{-3}$

from GGOU HFLAV 2021 adding a flat uncertainty covering the spread of central values

~1.5σ discrepancy



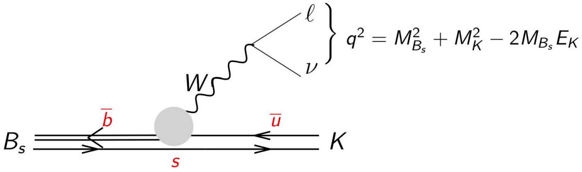
$|V_{ub} / V_{cb}|$ *(LHCb)* = $(9.46 \pm 0.79)\ 10^{-2}$ — From B_s to K at high q^2

$|V_{ub} / V_{cb}|$ *(LHCb)* = $(7.9 \pm 0.6)\ 10^{-2}$ — From Λ_b, excluded following FLAG guidelines

[LHCb first $B_s \to K\mu\nu$ result[1]]

Pseudoscalar to pseudoscalar semileptonic decay

Semileptonic decay of pseudoscalar meson B_s of mass M and momentum p to pseudoscalar meson P of mass m and momentum k, with $q = p - k$



$$\frac{d\Gamma(B_s \to P\ell\nu)}{dq^2} = \eta \frac{G_F^2 |V_{xb}|^2}{24\pi^3} \frac{(q^2 - m_\ell^2)^2 |\vec{k}|}{(q^2)^2} \left[\left(1 + \frac{m_\ell^2}{2q^2}\right) \vec{k}^{\,2} \, |f_+(q^2)|^2 + \frac{3m_\ell^2}{8q^2} \frac{(M^2 - m)^2}{M^2} |f_0(q^2)|^2 \right]$$

Form factors f_+ and f_0 from decomposition

$$\langle P(k) | \mathcal{V}^\mu(0) | B_s(p) \rangle = 2 f_+(q^2) \left(p^\mu - \frac{p \cdot q}{q^2} q^\mu \right) + f_0(q^2) \frac{M^2 - m^2}{q^2} q^\mu$$

where $\mathcal{V}^\mu = \bar{x}\gamma^\mu b$, with $x = u$ or c

Lattice setup

- Subset of 6 RBC/UKQCD 2+1-flavour DWF and Iwasaki gauge field ensembles
  - Three lattice spacings $a \sim 0.11, 0.08, 0.07\,\mathrm{fm}$, with $267\,\mathrm{MeV} < M_\pi < 433\,\mathrm{MeV}$
  - Light and strange quarks: Shamir DWF, $M_5 = 1.8$
  - Lattice spacings from combined RBC/UKQCD analysis [3–5]
- Bottom and charm quarks
  - Bottom quarks: RHQ [Christ, Li, Lin[6,7]; Columbia variant of Fermilab action[8]] with three nonpt-tuned parameters $(m_0 a, c_P, \zeta)$ [9]
  - Charm quarks: Möbius DWF, $M_5 = 1.6$[4,5,10]
    - 3 masses below m_c^{phys} on C ensembles
    - 2 masses which bracket m_c^{phys} on M and F

- Relate continuum and lattice currents: $\mathcal{V}_\mu$ and V_μ [11,12]

$$\langle P|\mathcal{V}_\mu|B_s\rangle = Z_{V_\mu}^{bx}\langle P|V_\mu|B_s\rangle$$

$$Z_{V_\mu}^{bx} = \rho_{V_\mu}^{bx}\sqrt{Z_V^{xx} Z_V^{bb}}$$

$$V_0 = V_0^0 + c_t^3 V_0^3 + c_t^4 V_0^4$$

$$V_i = V_i^0 + c_s^1 V_i^1 + c_s^2 V_i^2 + c_s^3 V_i^3 + c_s^4 V_i^4$$

  - $\rho_{V_\mu}^{bx}$ and $c_{t,s}^n$ computed perturbatively [Lehner]
  - Z_V^{bb} from $Z_V^{bb}\langle B_s|V_0|B_s\rangle = 2M_{B_s}$
  - Z_V^{xx} from $Z_V^{xx} = Z_A^{xx} + O(am_{\mathrm{res}})$

Extracting form factors

Calculate

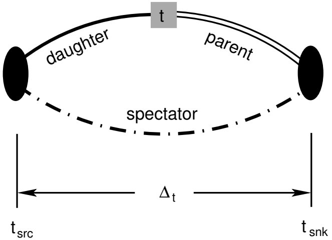
$$f_{\parallel}(E) = \frac{\langle P|\mathcal{V}^0(0)|B_s\rangle}{\sqrt{2M_{B_s}}}, \quad f_{\perp}(E) = \frac{\langle P|\mathcal{V}^i(0)|B_s\rangle}{k^i\sqrt{2M_{B_s}}}$$

from which

$$f_0(q^2) = \frac{\sqrt{2M_{B_s}}}{M_{B_s}^2 - M_P^2}\left[(M_{B_s} - E)f_{\parallel}(E) + (E^2 - M_P^2)f_{\perp}\right]$$

$$f_+(q^2) = \frac{1}{\sqrt{2M_{B_s}}}\left[f_{\parallel}(E) + (M_{B_s} - E)f_{\perp}\right]$$

Extract from a correlator ratio (written here for $t_{\mathrm{src}} = 0$)

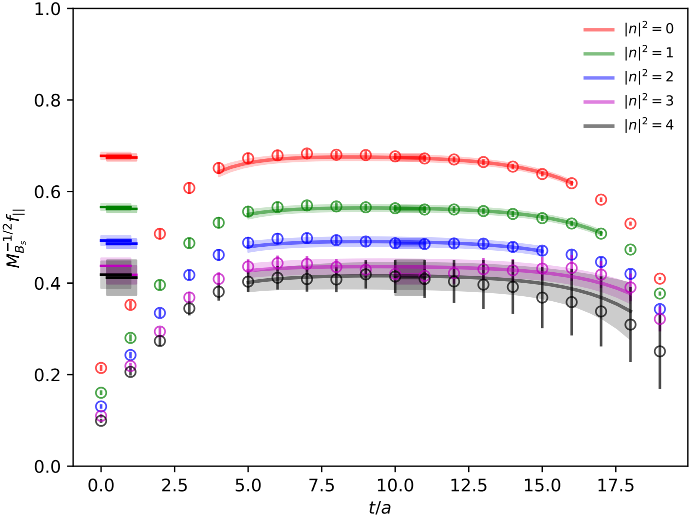


$$R_{3,\mu}(t, t_{\mathrm{snk}}, \vec{k}) = \frac{C_{3,\mu}(t, t_{\mathrm{snk}}, \vec{k})}{\sqrt{C_2^P(t, \vec{k})C_2^{B_s}(t_{\mathrm{snk}} - t, \vec{0})}}\sqrt{\frac{2E_P}{e^{-E_P t - M_{B_s}(t_{\mathrm{snk}} - t)}}}$$

$$f_{\parallel}^{\mathrm{bare}}(\vec{k}) = \lim_{0 \ll t \ll t_{\mathrm{snk}}} R_{3,0}(t, t_{\mathrm{snk}}, \vec{k})$$

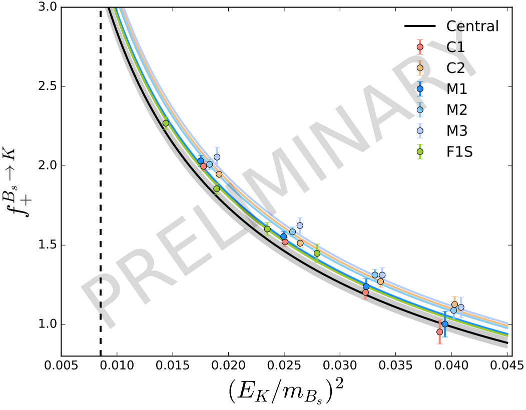
$$f_{\perp}^{\mathrm{bare}}(\vec{k}) = \lim_{0 \ll t \ll t_{\mathrm{snk}}} \frac{1}{p_P^i} R_{3,i}(t, t_{\mathrm{snk}}, \vec{k})$$

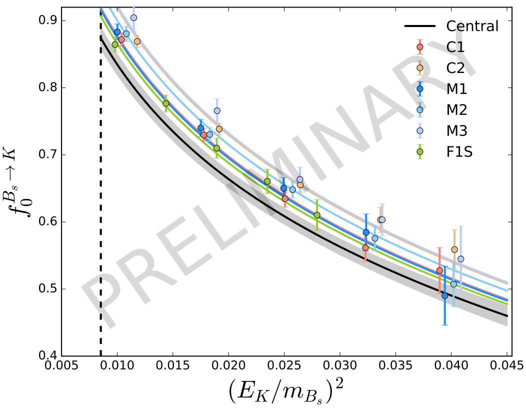
$B_s \longrightarrow K$ form factor extraction



$f_{\parallel}$ on coarse (C1) ensemble

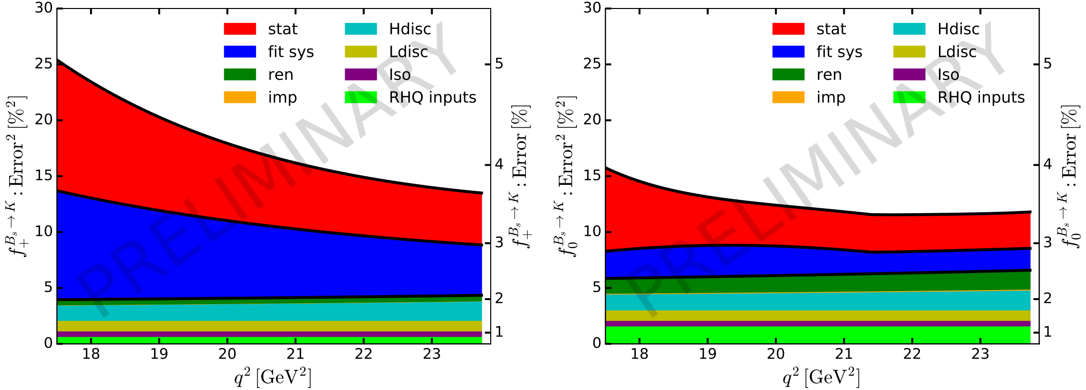
$B_s \longrightarrow K$ chiral-continuum extrapolation





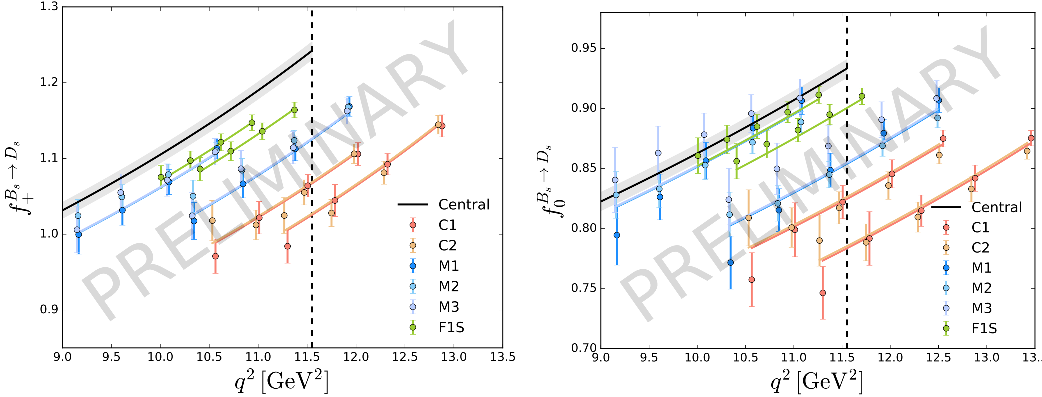
$$f^{B_s \to K}(M_\pi, E_K, a^2) = \frac{\Lambda}{E_K + \Delta}\left[c_0\left(1 + \frac{\delta f(M_\pi^s) - \delta f(M_\pi^p)}{(4\pi f_\pi)^2}\right) + c_1 \frac{\Delta M_\pi^2}{\Lambda^2} + c_2 \frac{E_K}{\Lambda} + c_3 \frac{E_K^2}{\Lambda^2} + c_4 (a\Lambda)^2\right]$$

$B_s \longrightarrow K$ cumulative error budget



▸ fit sys

$B_s \to D_s$ charm inter-/extrapolation and chiral-continuum extrapolation

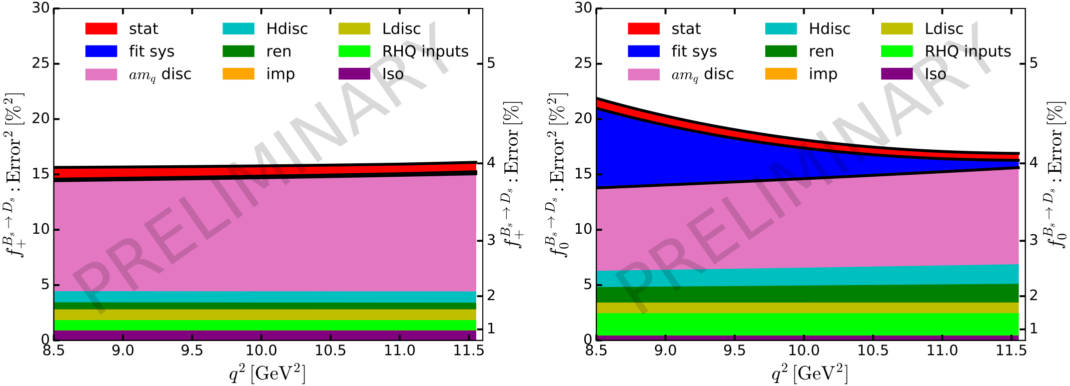


$$f(q^2, a, M_\pi, M_{D_s}) = \left[c_0 + \sum_{j=1}^{n_{D_s}} c_{1j}\, h\left(\frac{M_{D_s}}{\Lambda}\right)^j + c_2 (a\Lambda)^2 \right] P_{a,b}(q^2/M_{B_s}^2)$$

$$h\left(\frac{M_{D_s}}{\Lambda}\right) = \frac{\Lambda}{M_{D_s}} - \frac{\Lambda}{M_{D_s}^{\text{phys}}}$$

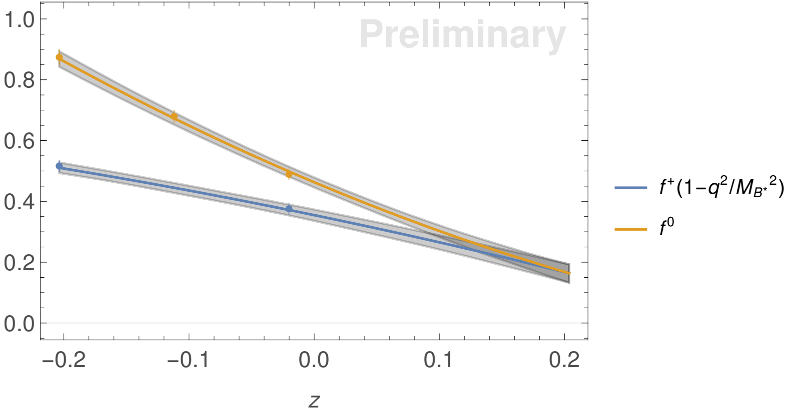
$$P_{a,b}(x) = \frac{1+\sum_{i=1}^{a} a_i x^i}{1+\sum_{i=1}^{b} b_i x^i}$$

$B_s \longrightarrow D_s$ cumulative error budget



▸ fit sys

z-fits



- Do z-fits after χ-ctm extrapolation
- Use BGL[13–19] and BCL[20] for $B_s \longrightarrow K$ and $B_s \longrightarrow D_s$
- Example shown is BCL fit for $B_s \longrightarrow K$, with $f^+(q^2)(1 - q^2/m^2_{B^*})$ (lower) and $f^0(q^2)$ (upper) plotted

R ratios for LFU tests

$$R(P) = \frac{\int_{m_\tau^2}^{q^2_{max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\tau\bar{\nu}_\tau)}{dq^2}}{\int_{m_\ell^2}^{q^2_{max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\ell\bar{\nu}_\ell)}{dq^2}} \qquad R^{new}(P) = \frac{\int_{q^2_{min}}^{q^2_{max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\tau\bar{\nu}_\tau)}{dq^2}}{\int_{q^2_{min}}^{q^2_{max}} dq^2 \, \frac{\omega_\tau(q^2)}{\omega_\ell(q^2)} \frac{d\Gamma(B_{(s)}\to P\ell\bar{\nu}_\ell)}{dq^2}}$$

- Adopt idea proposed for $B_{(s)} \longrightarrow V$ decays [Isidori–Sumensari[21]]
  - Common integration range; $q^2_{min} \geq m_\tau^2$ [Freytsis et al[22], Bernlochner et al[23], Soni[24]]
  - *Same* weights for vector parts in integrands for τ and ℓ
- Write

$$\frac{d\Gamma(B_{(s)}\to P\ell\nu)}{dq^2} = \Phi(q^2)\omega_\ell(q^2)\left[F_V^2 + (F_S^\ell)^2\right]$$

$$\Phi(q^2) = \eta \frac{G_F^2|V_{xb}|^2}{24\pi^3}|\vec{k}|$$

$$\omega_\ell(q^2) = \left(1 - \frac{m_\ell^2}{q^2}\right)^2 \left(1 + \frac{m_\ell^2}{2q^2}\right)$$

$$F_V^2 = \vec{k}^2|f_+(q^2)|^2$$

$$(F_S^\ell)^2 = \frac{3}{4}\frac{m_\ell^2}{m_\ell^2 + 2q^2}\frac{(M^2 - m^2)^2}{M^2}|f_0(q^2)|^2$$

R ratios for LFU tests

$$R(P) = \frac{\int_{m_\tau^2}^{q^2_{\rm max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\tau\bar\nu_\tau)}{dq^2}}{\int_{m_\ell^2}^{q^2_{\rm max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\ell\bar\nu_\ell)}{dq^2}}$$

$$R^{\rm new}(P) = \frac{\int_{q^2_{\rm min}}^{q^2_{\rm max}} dq^2 \, \frac{d\Gamma(B_{(s)}\to P\tau\bar\nu_\tau)}{dq^2}}{\int_{q^2_{\rm min}}^{q^2_{\rm max}} dq^2 \, \frac{\omega_\tau(q^2)}{\omega_\ell(q^2)} \frac{d\Gamma(B_{(s)}\to P\ell\bar\nu_\ell)}{dq^2}}$$

- Adopt idea proposed for $B_{(s)} \longrightarrow V$ decays [Isidori–Sumensari[21]]
  - Common integration range; $q^2_{\rm min} \geq m_\tau^2$ [Freytsis et al[22], Bernlochner et al[23], Soni[24]]
  - *Same* weights for vector parts in integrands for τ and ℓ
- Write

$$\frac{d\Gamma(B_{(s)}\to P\ell\nu)}{dq^2} = \Phi(q^2)\omega_\ell(q^2)\left[F_V^2+(F_S^\ell)^2\right]$$

- If drop scalar contribution, $(F_S^\ell)^2$, in denominator ($m_\ell^2/2q^2 \leq m_\mu^2/2m_\tau^2 = 0.002$) expect

$$R^{\rm new,SM}(P) = 1 + \frac{\int_{q^2_{\rm min}}^{q^2_{\rm max}} dq^2 \, \Phi(q^2)\omega_\tau(q^2)(F_S^\tau)^2}{\int_{q^2_{\rm min}}^{q^2_{\rm max}} dq^2 \, \Phi(q^2)\omega_\tau(q^2)F_V^2}$$

Summary

- Finalising results
- Additional lattice spacing since 2015 $B_s \longrightarrow K$ and added $B_s \longrightarrow D_s$
- Subsequently $B \longrightarrow D\ell\nu$, vector final states, rare decays, B_c decays, ...

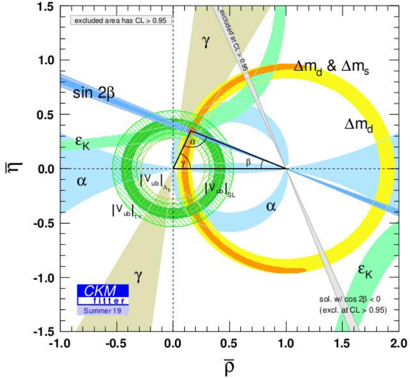
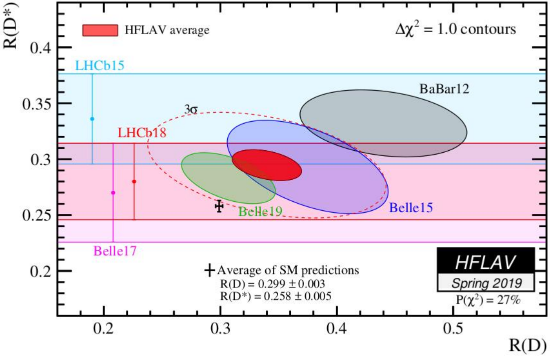
Motivation

[CKMfitter[25]]



[HFLAV[26]]



- Determine fundamental parameters of the Standard Model, eg $|V_{ub}|$, $|V_{ub}|$
- Test/challenge SM: eg lepton flavour universality via $R(D^{(*)})$

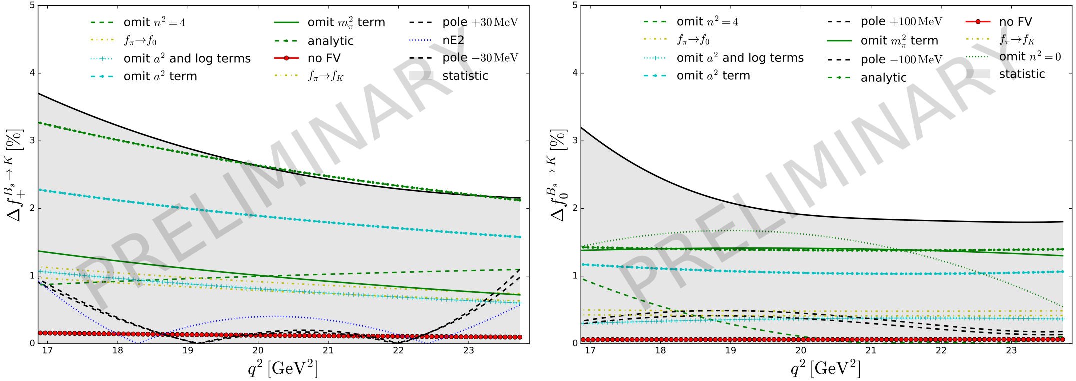
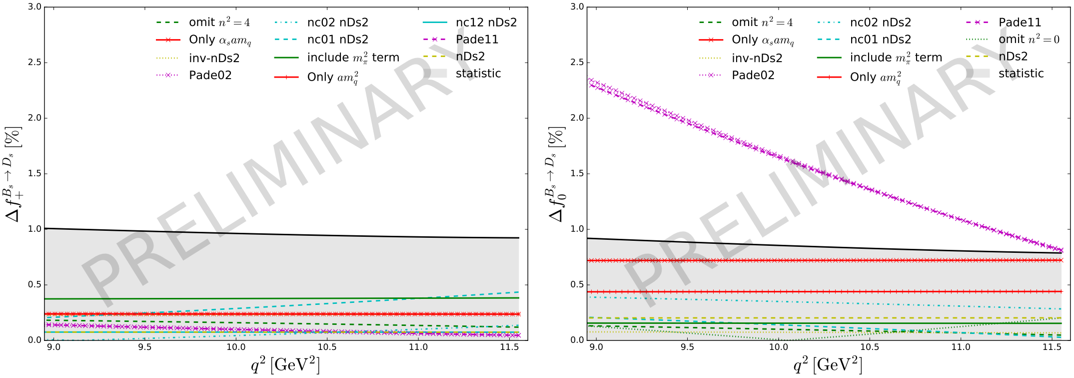
setup

Chiral-continuum fit systematics: $B_s \to K$



$\Delta f_i = |f_i^{\text{pref}} - f_i^{\text{alt}}|/f_i^{\text{pref}}$ for $i = 0, +$, for form-factor central values under fit variations.
Shaded band shows statistical uncertainty of preferred fit.

Chiral-continuum fit systematics: $B_s \to D_s$



$\Delta f_i = |f_i^{\rm pref} - f_i^{\rm alt}|/f_i^{\rm pref}$ for $i = 0, +$, for form-factor central values under fit variations. Shaded band shows statistical uncertainty of preferred fit.
