

Proposed By-law Addition

- An ad hoc By-law committee (Maurizio Bonesini, Mark Convery, Alberto Guglielmi, Vittorio Paolone, Bob Wilson) was asked to draft a by-law addition to clarify “active roles in the scientific, technical or service activities of the collaboration” in Section 4.ii
- They propose (new text in bold):

4.ii Members must maintain active roles in the scientific, technical or service activities of the collaboration. ~~The expected time commitment for students and post-docs is at least 50% of research time averaged over one year.~~ **Every collaborator should have a "recognizable activity", which represents a tangible and ongoing contribution to the experiment. For example, this could include work on hardware, software or data analysis. It could also include management or supervision of junior collaborators.** ICARUS management will maintain a list of activities where additional effort is needed and will facilitate matching these with available collaborators. Authorship on ICARUS publications carries the additional requirements and qualifications described in Article 5.
