PanDA: recap and questions for next phase

- Year 1 concluded with working integration of PanDA and GKE for production and analysis jobs
  - GKE node setup depended heavily on the characteristics of the job (duration: preemptible, IO intensity: disk configuration)
    - Will we run a PanDA GKE queue for Year 2?
    - What types of jobs will we run?
    - Remaining limitations: direct I/O not working and 10-minute URL signature
- Year 2 will have an important "Analysis Facility" component
  - Interactive world vs batch world
  - Introduction of "new" tools/libraries/paradigms
    - What is possible to integrate and what not
  - New responsibilities for e.g. Dask cluster setup
