

## **WLCG and Globus**

The next chapter

Oliver Keeble

24/02/2021

# Why are we here?

- Globus is in the news for two reasons
  - With the end of support for their open source software distribution (GT), WLCG is *moving away* from their data transfer solution, GridFTP
  - With the rise in resources available at HPC centres, WLCG is being *pulled back* to Globus
    - Why? Because Globus is the HPC go-to data movement solution
    - But... GridFTP is not what it used to be...

Toolkit Components

Core **N** -

The Globus Toolkit is an open source software toolkit used for building grids. It is being developed by the Globus Alliance and many others all over the world. A growing number of projects and companies are using the Globus Toolkit to unlock the potential of grids for their cause. Learn more...

Globus Toolkit 3.2

#### Latest Development Release

**Development Releases** [ download ] [ docs ]

Our newest stable release contains many bug fixes, performance improvements and new features, as well as a completely new documentation structure.

Please read the respective Calls for Community Testing, located here.

For the latest information about plans for GT4, click here.

#### **Developer News**

#### **XML**

12.17.2004 A new GT4 Alpha development release is now available.

- "Globus", still often referred to as Globus Online
- Makes heavy use of "Globus Connect Server v4", aka GridFTP

### Enter Globus Connect Server (GCS) v5

- Globus Connect Server v4 was GridFTP
- Globus Connect Server v5 is now available
  - Something GridFTP-ish
    - No protocol documentation
      - Legal questions?
    - No long-term interoperability with v4 (GridFTP)
      - V4's lifetime is limited
    - No open source reference implementation
      - Only dCache has their own GridFTP implementation
      - EOS and DPM (at least) use the Globus GridFTP server with a backend plugin

## **Integrating support for HPCs with GCSv5**

Oliver Keeble | WLCG & Globus

WLCG Stack

WLCG Developments

Globus

## The solution(s)

- Where does the bridge get built?
  - **1)WLCG implements support for GCS v5** 
    - Protocol support in (all?) SEs, gfal2/FTS, Rucio
      - Can we deploy "dual stack" systems?
    - Configure GCS v5 side to authenticate and authorise WLCG clients
  - **2)GCS v5 implements support for WebDAV** 
    - They already advertise "direct access from browsers and other HTTPS clients"
    - With pressure from WLCG through the HPC centres
    - Easy request to articulate, to justify and, technically, to satisfy
  - 3)WLCG provides an alternative WebDAV endpoint for HPCs
    - Maybe part of the "pressure" above
