(Experiment:  
Generalov L.N. et al.  
// Izv. RAS. 2020. V.  
84. P. 1774.)

- Literature data

Type	Scattering Angle, degr	$E_d$ , MeV
$d\sigma/d\Omega$ (production of p or n or $\gamma$ ) (Legendre polynomial fitting for $\sigma$ obtaining)	0-180	0.005-15
$\sigma$ from the article	-	

- Data sets for  $(d,n_2)$  and  $(d,n_4)$  reactions are poor. So **data from  $(d,p_2)$  and  $(d,p_4)$  reactions** were used as cross section data **for the relevant mirror reactions  $(d,n_2)$  and  $(d,n_4)$ .**

- The library of evaluated and experimental data on charged particles interactions with light nuclei developed at VNIIEF.
- 134 reaction channels; data types: integral and differential cross sections and nuclear reaction rates.
- No-model approach is used for obtaining of evaluated data.
- Evaluated function

$$f = S(E) + R(E)$$

Smooth part - spline

$$S(E) = \sum_{j=0}^p a_j (E - x_0)^j$$

Breit-Wigner resonances

$$R_l(E) = \sum_{i=0}^{n_l-1} \frac{H_i (\Gamma_i / 2)^2}{(E - E_i)^2 + (\Gamma_i / 2)^2} + \delta_l \sum_{j=0}^{p_l} a_j (E - x_0)_j$$

resonance

background

- Astrophysical S-factor is used for evaluation

$$S(E_{cm}) = \sigma(E_{cm}) E_{cm} \exp\left(\sqrt{\frac{E_G}{E_{cm}}}\right) \sqrt{E_G} = 0.98948 z_1 z_2 \sqrt{\frac{m_1 m_2}{m_1 + m_2}}$$

- $\chi^2$  minimization for quality control of the evaluated curve

$$\chi^2 = \frac{\sum_{i=1}^{N_d} \left( \frac{S_i - f(E_i)}{\sigma_i} \right)^2}{N_d - N_p}$$

**Abstract:** An electron version of the evaluated and experimental data on charged particles for thermonuclear applications (SaBa) was prepared on the base of handbook "Nuclear Physics Constants for Thermonuclear Fusion" //INDC(CCP)-326/L+F, VIENNA, 1991.  
Data on 100 channels for 52 reactions are presented in the Library. Program code was prepared using the object-oriented programming environment Borland C++ Builder for Microsoft Windows 95 and Windows NT operating systems.  
Optimal set of data processing procedures and friendly interface provide remarkable possibilities for the active use of this program for various applications in the field of thermonuclear fusion. It is available online ([http://www-nds.iaea.or.at/indc\\_sel.html](http://www-nds.iaea.or.at/indc_sel.html)), on CD-ROM or on a set of PC diskettes from the IAEA Nuclear Data Section, costfree, upon request.

- Our experimental results were used as reference ones.
- Each pair of mirror reactions was analyzed simultaneously:  $(d,p_0)$  and  $(d,n_0)$ ,  $(d,p_1)$  and  $(d,n_1)$ ,  $(d,p_2)$  and  $(d,n_2)$ ,  $(d,p_4)$  and  $(d,n_4)$ . Evaluation of the data consisted of evaluation of the mirror reactions integral cross sections and its experimental ratios. Evaluation procedure was performed at iterative way.
