

CMS Standard Model Results

Friday, 24 September 2021 14:55 (25 minutes)

The Large Hadron Collider (LHC) has completed in 2018 its second working phase and the experiments have collected data sets of proton–proton collisions at center-of-mass energies of 13 TeV with an integrated luminosity of about 140 fb^{-1} . This report reviews the status of standard model measurements with the CMS experiment at the LHC.
