Joint Annual Meeting of ÖPG and SPS 2021

Contribution ID: 214

Type: Poster

[180] Continuous-Wave Ring Interband Cascade Lasers for Spectroscopic Sensing

Tuesday 31 August 2021 19:09 (1 minute)

Infrared spectroscopy is a reliable tool for chemical sensing in various fields from industry over environmental monitoring to medicine. Interband cascade lasers (ICLs) have proven to be important light sources for such applications. Utilization of ring-shaped laser geometries provides a collimated beam profile as well as vertical light emission. We combine the ring geometry with the ICL technology and present the first continuous-wave ring ICL. The laser provides single-mode emission at 4.4μ m, which makes it an ideal candidate for various spectroscopic applications. In addition, the relatively low power consumption of ICLs facilitates lightweight sensors for hand-held devices.

Authors: SZEDLAK, Rolf (Vienna University of Technology); KNÖTIG, Hedwig (Institute of Solid State Electronics, TU Wien); HINKOV, Borislav (TU Wien); WEIH, Robert (nanoplus Nanosystems and Technologies GmbH); HÖFLING, Sven (University of Würzburg); SCHRENK, Werner (TU Wien); KOETH, Johannes (nanoplus Nanosystems and Technologies GmbH); WACLAWEK, Johannes Paul (TU Wien); LENDL, Bernhard (TU Wien); STRASSER, Gottfried (TU Wien)

Presenter: SZEDLAK, Rolf (Vienna University of Technology)

Session Classification: Poster Session

Track Classification: Condensed Matter Physics (KOND)
