【57】 Optotune - from a fast growth high tech startup to a market leader in tunable optics

Thursday, 2 September 2021 17:00 (20 minutes)

Since 2008 Optotune has developed multiple pioneering product lines, which include tunable optical devices, such as lenses, mirrors, and prisms as well as beam modulation devices for enhancing image resolution, speckle reduction or dynamic beam deflection. Optotune's technologies are sold to industrial and consumer markets and are used in applications ranging from machine vision to projection. Dr. Wolfgang Zesch is Principle Development Engineer and Technical Product Manager at Optotune. He will present on some examples how pioneering optical technologies for the fast-paced industrial and consumer markets are developed.
