Recent results from Belle II

Tuesday 2 August 2022 14:00 (30 minutes)

The Belle II experiment at the SuperKEKB energy-asymmetric $e+e-$ collider is a substantial upgrade of the B factory facility at the Japanese KEK laboratory. The design luminosity of the machine is $6 \times 10^{35} \text{ cm}^{-2}\text{s}^{-1}$ and the Belle II experiment aims to ultimately record 50 ab^{-1} of data, a factor of 50 more than its predecessor. With this data set, Belle II will be able to measure the Cabibbo-Kobayashi-Maskawa (CKM) matrix, the matrix elements and their phases, with unprecedented precision and explore flavor physics with B and charmed mesons. we will review the latest results from Belle II, with emphasis on those related to hadronic decay.

Preferred track

Hadronic Issues in Heavy-Flavour Physics

Subfield

HEP experiment

Attending in-person?

Yes

On behalf of collaboration?

Belle II

Primary author: Mr WESSEL, Christian (University of Bonn)

Presenter: Mr WESSEL, Christian (University of Bonn)

Session Classification: Heavy-flavour physics 1

Track Classification: Hadronic issues in heavy-flavour physics
