R value measurements at BESIII

Tuesday 2 August 2022 12:10 (20 minutes)

At BESIII, the R value is measured with a total of 14 data points with the corresponding c.m. energy going from 2.2324 to 3.6710 GeV.

The statistical uncertainty of the measured R is less than 0.6%. Two different simulation models, the LUARLW and a new Hybrid generated, are used and give consistent detection efficiencies and initial-state-radiation corrections. An accuracy of better than 2.6% below 3.1 GeV and 3.0% above is achieved in the R values.

Preferred track

Hadron Structure

Subfield

HEP experiment

Attending in-person?

Yes

On behalf of collaboration?

BESIII

Author: LIU, Beijiang

Presenter: REDMER, Christoph (Universität Mainz)

Session Classification: Hadron structure 2

Track Classification: Hadron structure
