Light flavor vector mesons between 2 and 3 GeV at BESIII

Monday 1 August 2022 18:40 (10 minutes)

At BESIII, the lineshapes of $e^+e^- \rightarrow \phi \eta'$, $\phi \eta$, KK , $\omega \pi^0$, $\eta \pi \pi$, $\omega \pi \pi$ are measured from 2.0 to 3.08 GeV, where resonant structures are observed in these processes. Multiple lineshapes of intermediate state are obtained by a partial wave analysis of $e^+e^- \rightarrow K^+ K^- \pi^0 \pi^0$, $K^+ K^- \pi^0$ and the structures observed provide essential input to understand the nature of $\phi(2170)$. These results provide important information for light flavor vector mesons i.e. excited ρ , ω and ϕ , for energy regions above 2 GeV.

Preferred track

Hadron Spectroscopy

Subfield

HEP experiment

Attending in-person?

Yes

On behalf of collaboration?

BESIII

Primary author: LIU, Beijiang

Presenters: Mr ZHANG, HAO (Theoretical Division, Institute of High Energy Physics, Chinese Academy of Sciences); ZHANG, Hao

Session Classification: Poster Session

Track Classification: Hadron spectroscopy
