

Instructions to access the AWS Braket tutorial

- 1) Go to <https://www.cloudbank.org/> and select login, click in "LOG IN WITH CILOGON". Select an identity Provider (select CERN, any other account won't work for this tutorial).
- 2) Sign-in with your CERN account on CERN SSO. The first time you do this, you will finish in the 2-Factor Auth (2FA) setup of CloudBank. Choose your method of 2FA (mail, google authenticator, etc.)
- 3) Once MFA is established, verify your identity and login. You will end up on the CloudBank Dashboard.
- 4) Click on "Access your Billing accounts". On the table you should have an entry with a Fund called "AWS Braket Training"
- 5) Click on "login", you will end up on the CILOGON Federated proxy where CERN is already selected as Identity provider. Click on Log On. You will end up in the AWS console with your CERN account (should read YourUsername/Your.Username@cern.ch on the top right of the page). From this moment you will have access to AWS Braket and your instructor will provide further instructions.
