

Introduction to RAPIDS, GPU-accelerated data science libraries

Wednesday 7 July 2021 15:30 (30 minutes)

Data volumes and computational complexity of analysis techniques have increased, but the need to quickly explore data and develop models is more important than ever. One of the key ways to achieve this has been through GPU acceleration. In this talk we introduce RAPIDS, a collection of GPU accelerated data science libraries, and illustrate how to use Dask and RAPIDS to dramatically increase performance for common ETL/ML workloads.
