

ELENA and AD commissioning status

› ELENA

- Orbit drift/oscillation from H- source still observed, but seems to calm down?
 - 1 trip of High Voltage on Monday
- Continuing commissioning/studies of deceleration cycle:
 - Optics studies, orbit correction
 - E-cooler studies with Hminus
 - RF gymnastics tests
- Intervention on Qmeter to correct inversion of signals (V plane)

› Transfer lines

- Vacuum problem in LNE02, to be investigated today
- Wrong connection of electrostatic quadrupoles in LNE02: old optics implemented, to be corrected today

› AD:

- Injection of resin in stochastic cooling kicker done on Thursday, cooling down today, leak test tomorrow
- Interlock cable between access system and power converter repaired → DSO next week
